Table of contents	1
Acknowledgements	5
List of tables	7
List of figures	9
1 Introduction	13
1.1 Background	13
1.2 Objectives and approach	13
1.3 Outline of this thesis	14
References	16
2 Peat areas, global warming, management and greenhouse gases	17
2.1 Introduction	17
2.2 Climate change and the greenhouse effect	17
2.3 Terrestrial carbon cycle and feedbacks to climate	20
2.4 Peatland: greenhouse gases, climate and management	22
2.5 Measurement techniques	28
2.6 Previous research on greenhouse gas fluxes and balances	32
References	36
3 The full greenhouse gas balance of an abandoned peat meadow	45
Abstract	45
3.1 Introduction	45
3.2 Site description	47
3.3 Methods and instrumentation	47
3.4 Results	52
3.5 Discussion and conclusions	62
Acknowledgements	64
References	65
4 A compact and stable eddy covariance set-up for methane measurements using off-axis integrated cavity output spectroscopy	69
Abstract	69
4.1 Introduction	69
4.2 Methods and materials	71

4.3	<i>Results</i>	82
4.4	<i>Conclusions and discussion</i>	87
	<i>Acknowledgements</i>	88
	<i>References</i>	89
5	Multi-technique assessment of spatial and temporal variability of methane fluxes in a peat meadow	93
	<i>Abstract</i>	93
5.1	<i>Introduction</i>	94
5.2	<i>Methods and instrumentation</i>	96
5.3	<i>Results I: chamber measurements and additional soil observations</i>	103
5.4	<i>Results II: Soil concentrations and surface fluxes from soil gradients</i>	110
5.5	<i>Results III: eddy covariance, meteorological and continuous soil data</i>	113
	<i>References</i>	126
6	Vegetation as indicator for methane emissions, carbon dioxide fluxes and greenhouse gas balances from peat land	133
	<i>Abstract</i>	133
6.1	<i>Introduction</i>	133
6.2	<i>Methods and materials</i>	136
6.3	<i>Results</i>	138
6.4	<i>Discussion</i>	154
	<i>Acknowledgements</i>	160
	<i>References</i>	161
7	Synthesis, conclusions and recommendations for future research and management	167
7.1	<i>Introduction</i>	167
7.2	<i>Field conditions: eutrophication, land elements and vegetation patterns</i>	167
7.3	<i>Measurement techniques</i>	168
7.4	<i>Full greenhouse gas balance</i>	171
7.5	<i>Spatial variability of CH₄ fluxes: vegetation patterns and water</i>	

	<i>table</i>	172
7.6	<i>Temporal variability of CH₄ fluxes</i>	172
7.7	<i>Small scale variability of net carbon balance and GHG balance</i>	174
7.8	<i>Effects of changes in management and climate</i>	174
7.9	<i>Main conclusions</i>	175
7.10	<i>Research perspectives</i>	178
7.11	<i>Recommendations for management</i>	180
	<i>References</i>	182
8	Samenvatting, conclusies en aanbevelingen voor management	183
8.1	<i>Introductie</i>	183
8.2	<i>Achtergrond</i>	183
8.3	<i>Onderzoeksdoelen en -aanpak</i>	185
8.4	<i>Veldcondities: eutrofiëring, landelementen en vegetatie patronen</i>	185
8.5	<i>Meettechnieken</i>	186
8.6	<i>De complete broeikasgasbalans van een verlaten veenweide- gebied</i>	190
8.7	<i>Ruimtelijke variabiliteit van methaanfluxen: vegetatie en waterstand</i>	191
8.8	<i>Temporele variabiliteit van methaanfluxen</i>	192
8.9	<i>Kleinschalige variabiliteit van broeikasgasbalansen</i>	193
8.10	<i>Veranderingen in landgebruik en klimaat</i>	194
8.11	<i>Conclusies</i>	195
8.12	<i>Aanbevelingen voor management</i>	198
	<i>Referenties</i>	200
	Peer reviewed publications	203
