CONTENTS

General Introduction and Outline of the Thesis I.

Endothelial Dysfunction and Diabetes: Roles of impaired insulin signaling, obesity and perivascular adipose tissue II.

IRS1 Deficiency reduces Endothelin-1 Sensitivity in Muscle Arterioles and affect Muscle Vascularization Submitted for publication

IRS2 Deficiency decreases Blood Pressure by Impairment of Insulin-mediated Endothelin-1 Activation in Muscle Arterioles Submitted for publication

PKC-theta Activation induces Insulin-mediated Constriction of Muscle Arterioles Diabetes, 2008; 57 (3): 706-713

Selective PKC-theta Activation in Muscle- opposed to Adipose Tissue Arterioles during Obesity. Consequences for Tissue Perfusion Submitted for publication

Muscle Perivascular Adipose Tissue interferes in Insulin-mediatedVasoreactivity by Activation of AMPK

Conclusions and General Discussion VIII.

Summary / Samenvatting IX.

Acknowledgements / Dankwoord X.
