Towards ambulatory assessment of spinal loading in the field

Gert S. Faber
The work reported in this thesis was performed at the Research Institute MOVE, Faculty of Human Movement Sciences, VU University Amsterdam, The Netherlands. The research was funded by the Dutch Ministry of Economic Affairs and SenterNovem (the FreeMotion project), Stichting Arbouw, the Royal Netherlands Navy, and STEP Nederland.

Cover photo: The cover photo was taken on the salt planes of Uyuni, Bolivia.

Towards ambulatory assessment of spinal loading in the field

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad Doctor aan de Vrije Universiteit Amsterdam, op gezag van de rector magnificus prof.dr. L.M. Bouter, in het openbaar te verdedigen ten overstaan van de promotiecommissie van de faculteit der Bewegingswetenschappen op vrijdag 25 juni 2010 om 13.45 uur in de aula van de universiteit, De Boelelaan 1105

door

Gert Simon Faber

geboren te Amsterdam
promotor: prof.dr. J.H. van Dieën
copromotor: dr. I. Kingma
CONTENTS

Publications by the author

Chapter 1 General introduction

Chapter 2 The effects of ergonomic interventions on low back moments are attenuated by changes in lifting behaviour

Chapter 3 Effects of horizontal transport and familiarisation with different working methods on low back loading in manual lifting

Chapter 4 Effect of ship motion on spinal loading during manual lifting

Chapter 5 Validity of estimates of spinal compression forces obtained from worksite measurements

Chapter 6 Optimal inertial sensor location for ambulatory measurement of trunk inclination

Chapter 7 Determination of joint moments with instrumented force shoes in a variety of tasks

Chapter 8 Bottom-up estimation of joint moments during manual lifting using orientation sensors instead of position sensors

Chapter 9 Epilogue
