## Table of Contents

**Chapter 1**  Introduction  
**Chapter 2**  Histatins are the major wound-closure stimulating factors in human saliva as identified in a cell culture assay  
**Chapter 3**  Histatins enhance wound closure with oral and non-oral cells  
**Chapter 4**  Structure-activity analysis of histatin, a potent wound healing peptide from human saliva: cyclization of histatin potentiates molar activity 1,000 fold  
**Chapter 5**  Comparison of salivary histatin and the human cathelicidin LL-37 in wound healing and innate immunity  
**Chapter 6**  Receptor-mediated uptake of histatin is independent of cell activation  
**Chapter 7**  Use of sortase A for the efficient and rapid cyclization of long-sized peptides such as histatins  
**Chapter 8**  General discussion  
**Appendices**  Nederlandse samenvatting
