Acknowledgements

To my promoter Prof. Dr. Reina Mebius, dear Reina, it has been an honor and a pleasure to work with you over the years! I have learnt an amazing amount about research and life from you, in the end it turns out to be true - it is all about balance!

To my co-promoter Dr. Gerd Bouma, dear Gerd, thank you for all the advice that you gave when it came to finishing up the thesis and all the papers. Your insight and expertise was greatly appreciated.

To Dr. Schalk van der Merwe, Prof. Dr. Chris Mulder and Prof. Hayward Vermaak - the three people that made it possible for me to come to the Netherlands on a research exchange project on bone loss in chronic liver disease patients. Dear Schalk thank you for all your help and enthusiasm about research over the years, without having worked with you I wouldn’t be in immunology based research, I would never of come to The Netherlands and had the wonderful opportunity of doing my PhD aboard. To Chris, thank you for always being eager to hear about my research and for all the support that you have given me over the years. Dear Hayward thank you for providing me the opportunity at the Department of Chemical Pathology to do more immunology based research for my Masters degree. If it had not been for you the three of you my career as a research scientist would not have been possible.

To Prof. Dr. Vincent Everts, Dr. Teun de Vries and Ton Schoenmaker thank you for adopting me when I arrived in The Netherlands. You took me under your wings and taught me all I know about osteoclastogenesis assays and bone turnover. I will always be thankful for your support! I really enjoyed working with you. To the rest of OCB (Cor, Jolanda, Behrouz, Astrid and Jack) thank you for all the good memories over the years. Even though I “left” and started my PhD at MCBI it was always great to be “trapped” in the corridor between labs for a chat.

To Prof. Dr. Georg Kraal, dear Georg, thank you for adopting me at MCBI for my Masters degree. Between the MCBI and the ACTA lab I had all the tools at hand that I needed for my research project. You provided me with great insight over the years in both my Masters degree and PhD degree and helped teach me how to be a research scientists.

To Prof. Dr. Christien Dijkstra, dear Christien thank you for all your support over the years. When things got tough due to back problems and I nearly
gave up you really helped to put things in perspective and helped me to find the strength to persist and carry on with my PhD. Hartstikke bedankt!

To MCBI and in particular the members of group yellow (Reina, Georg, Joke, Ramon, Serge, Anna, Aram, Joost, Marlene, Toon, Rosalie, Jasper, Ronald, Erik, Antonio, Mascha, Gera and Bunny) . Thank you all so much for the help and support over the years. The comments and suggestions about how to proceed when things got tough along the way helped to make my thesis what it is. I thank all of you. Ramon thank you for always making the time to answer my “quick” questions which always had the tendency to turn into lengthy scientific discussions. To Mascha, Gera, Marlene and Antonio thank you for all the help with the experiments that needed to be done at the end of my thesis when I ran out of time and moved to the AMC. Without your help I would never of managed to finish! To my old office mates Elly, Erik, Ronald, Antonio and Marieke thank you for all the fun memories and of course the Kabouter Borrels. It was great sharing an office with you guys! To Toon (lab daddy), you were one of the first people I me when I arrived in The Netherlands and I guess your nickname says it all - in the beginning you had to share an office with three girls and you took care of us over the years and were always the go to person that knew everyone and everything!

To the people from the animal facility - Erwin and Carla, thank you for all the effort and time that the two of you invested in helping me set up the vitamin deficient and high animals. To Eelco thank you for helping me with the anesthetics and intradermal injections of stromal cells.

To the cheese fondue group, Marlene, Mascha, Rosalie and Gera. Besides all the research work, late nights and weekends we spent working together we always took the time to celebrate the small things with cheese fondue and of course bubbles! I really enjoyed them and I hope that even though more than half of us have left we still manage to maintain the tradition!

To Wouter, my new supervisor, thank you for all your support and understanding when it came to me working in your research group as a post doc while still having to complete my thesis. Also, thank you for giving me the freedom to pursue my research ideas in your group. To all my new colleagues, thank you for all giving me the opportunity of working with you, I have really enjoyed being involved in so many of your projects and look forward to all the experiments to come. A special thanks to Wouter. Renee, Shobhit, Serge, Jose and Laurens that helped out with proof reading my thesis for me to look for mistakes and typos. To Cathy and Jan thank you for all that the two of you have taught me about neuronal innervation of the intestine since I
started working at the AMC. It has been a pleasure working with you and I look forward to all the super cool experiments and discoveries we will make over the coming years!

To my Amsterdam family - Michelle, Ana, Sander, Marlene, Ronald, Elly, Eelco and Cathy, you have provided me with emotional support and friendship over the years. To Jan, although you spent a very short time in Amsterdam, you have always been a good friend to me no matter were you where in the world. Your friendship and advice always helped me to put things in perspective, thank you. To Michelle and family, Ana and Sander and family, Mascha and family thank you all for including me at Christmas time when I was unable to go back to my family in South Africa, it was really nice to be able to spend Christmas with you and your families. To Ana and Marlene thank you for agreeing to be my paranymph’s, it is an honor to have you stage with me. To Michelle, my super paranymph, thank you for taking care of things when we are on stage and for doing the translation of the summary. Without all of you this thesis would not have been possible. I struggle to find the appropriate words to thank you all for all that you have done for me in your own unique way so I will have to settle for a simple and humble “thank you”!

To my Mom, thank you so much for all the support through everything and always encouraging me in my research career. To Andre, Connie, Rebekah and Abbegail thank you guys for all the love and support over the years. To all my family and friends thank you for everything over the years.
Curriculum Vitae

Brenda Jean Olivier was born on the 2nd May 1978, in Ladysmith, South Africa. She attended the University of Pretoria, South Africa from 1997-2000 to obtain her Bachelor of Science Degree, specializing in Human Physiology. In 2002 she obtained her Honors Degree, with distinction, at the Department of Chemical Pathology, University of Pretoria, South Africa and continued with her Masters Degree. Her Masters Degree, focused on “the increased osteoclast formation and activity by peripheral blood mononuclear cells in chronic liver disease patients with osteopenia” under the supervision of Dr. Schalk van der Merwe at the Department of Experimental Gastroenterology and Prof. Hayward Vermaak at the Department of Chemical Pathology, University of Pretoria, South Africa. The research was done in collaboration with three departments at the Vrije Universiteit Medisch Centrum, Amsterdam, The Netherlands - (1) The Department of Gastroenterology, under the supervision of Prof. Dr. Chris Mulder, (2) ACTA with the group of Prof. Dr. Vincent Everts, and (3) The Department of Molecular Cell Biology and Immunology with the group of Prof. Dr. Georg Kraal and Prof. Dr. Reina Mebius. She obtained her Masters Degree, with distinction, in 2007 and continued with her PhD studies entitled “the formation and function of organized gut associated lymphoid tissue in health and disease” under the supervision of Prof. Dr. Reina Mebius at the Department of Molecular Cell Biology and Immunology, Vrije Universiteit Medisch Centrum, Amsterdam, The Netherlands. Currently she has joined the research group of Dr. Wouter de Jonge at the Tytgat Liver and Intestinal Research Institute, Academic Medical Centre, The Netherlands, to continue research on the neuronal control of organized gut associated lymphoid tissue of the intestines.
List of Publications

10. Olivier BJ, Molenaar R, Knippenberg M, Greuter MJ, Goverse G, Bouma G, Mebius RE. BALB/c mice have higher levels of retinoic acid signalling in the colon and less severe colitis when compared to C57BL/6 mice. Submitted for publication.

11. Molenaar R, Knippenberg M, Goverse G, Olivier BJ, de Vos A, O'Toole T, Mebius RE. Expression of RALDH Enzymes in MLN dendritic cells and MLN stromal cells is controlled by dietary Vitamin A. Submitted for publication.
