## CONTENT

1. General introduction

2. A systematic analysis of the feasibility of four-dimensional ultrasound imaging using spatiotemporal image correlation in routine fetal echocardiography
   Adapted from *Ultrasound Obstet Gynecol* 2008; 31: 625–632

3. Feasibility of automated 3-dimensional fetal cardiac screening in routine ultrasound practice
   Adapted from *J Ultrasound Med* 2009; 28: 881–888

4. Validation of volume measurements for fetal echocardiography using four-dimensional ultrasound imaging and spatiotemporal image correlation
   Adapted from *Ultrasound Obstet Gynecol* 2010; 35: 324-331

5. Reliability of fetal cardiac volumetry using spatiotemporal image correlation assessment of *in-vivo* and *in-vitro* measurements
   Adapted from *Ultrasound Obstet Gynecol* 2010; Sep; 36(3): 308-14

6. STIC Hallucinations. Gating artefacts in an *in vitro* model
   Submitted for publication

7. Fetal cardiac function assessed with four-dimensional ultrasound imaging using spatiotemporal image correlation
   Adapted from *Ultrasound Obstet Gynecol* 2009; 33: 272–281

8. Assessment of fetal cardiac function, an overview
   Submitted for publication

9. General discussion and future prospects

10. Summary
