# Table of Contents

## Introduction

**Chapter 1** Introduction, adapted from “The Dermis as a Portal for Dendritic Cell targeted Immunotherapy of Cutaneous Melanoma” and outline of this thesis

*Current Topics in Microbiology and Immunology, in press*

## Clinical observations in melanoma patients

**Chapter 2** Non-radical diagnostic biopsies do not negatively influence melanoma patient survival

*Ann Surg Oncol. 2007 Apr;14(4):1424-30*

**Chapter 3** 10-year follow-up results; clinical outcome of stage I/II melanoma patients

## Immunohistochemistry of primary tumors and SLN from stage I/II melanoma patients

**Chapter 4** Favorable outcome in clinically stage II melanoma patients is associated with the presence of activated tumor infiltrating T-lymphocytes and preserved MHC class I antigen expression

*Int J Cancer 2008 Aug 1;123(3):609-15*

**Chapter 5** Absence of Granzyme B positive tumor-infiltrating lymphocytes in primary melanoma excisional biopsies is strongly associated with the presence of sentinel lymph node metastasis

*Cell Oncol. 2009;31(5):407-13*

## Priming of the SLN of melanoma patients with GM-CSF and/or PF-3512676 CpG-B

**Chapter 6** Local administration of PF-3512676 CpG-B instigates tumor-specific CD8\(^+\) T-cell reactivity in melanoma patients

*Clin Cancer Res. 2008 Jul 15;14(14): 4532-42*

**Chapter 7** Activation and recruitment of BDCA3/CD141\(^+\) Dendritic Cell subsets to the Sentinel Lymph Node by delivery of CpG-B and GM-CSF at the melanoma excision site

**Chapter 8** Effects of the method of T cell expansion for primed SLN cells from melanoma patients on the quantity and quality of the CD8\(^+\) cytotoxic T cell fraction

## Summarizing Discussion and Future Prospectives

**Chapter 9** Summarizing Discussion and Future Prospectives

Dutch summary

**Chapter 10** Curriculum vitae
