## Contents

**Chapter 1**  
Introduction and outline of thesis  

**I  Clinimetric studies**

**Chapter 2**  
A clinimetric overview of scar assessment scales  
*Journal of Burn Care and Rehabilitation. In press*

**Chapter 3**  
Objective scar assessment tools: a clinimetrical appraisal  
*Plastic Reconstructive Surgery. 2011;127(4):1561-70*

**Chapter 4**  
Distance Mapping versus Fourier analysis: new applications for reliable and valid collagen bundle morphometry  
*In revision*

**Chapter 5**  
A reliable, non-invasive measurement tool for anisotropy in normal skin and scar tissue  
*Skin Research and Technology. 2010; 16(3): 325-331*

**II  Experimental studies**

**Chapter 6**  
Differences in collagen architecture between keloid, hypertrophic scar, normotrophic scar, and normal skin: an objective histopathological analysis  
*Wound Repair and Regeneration. 2009; 17(5): 649-656*

**Chapter 7**  
Adaptation of the dermal collagen structure of human skin and scar tissue in response to stretch: an experimental study  
*Submitted*
III Clinical studies

Chapter 8 Perforator based interposition flaps for sustainable scar contracture release: a versatile, practical, and safe technique

Chapter 9 Efficacy of skin stretching for burn scar excision: a multicenter randomized controlled trial

Chapter 10 Sustainable effect of skin stretching for burn scar excision: long-term results of a multicenter randomized controlled trial
Burns. In press

Chapter 11 Discussion and future perspectives

Summary

Samenvatting
