De Boelelaan 1105

door

Sander Jacobus Johannes Konijn

geboren te Heerhugowaard
promotoren: prof.dr. A. Lucas

prof.dr.ir. H.A. Rijken

copromotor: dr. R.G.W. Kräussl
Acknowledgements

Writing this thesis would not have been possible without the support of others. This thesis would therefore not be complete without expressing my gratitude towards everyone involved.

I would first like to thank my supervisors. I was very fortunate Andre Lucas was part of the team of supervisors. Andre has become a very active member of this research project along the way. Without doubt his contribution to this thesis is indispensable. Thank you Andre for your advice, your technical feedback, and your support in every other direction. You have really shown to be a dedicated and supportive supervisor, I owe a great deal to you.

I thank Herbert Rijken for initiating the research project, and for supporting my candidacy as a PhD student. Thank you Herbert for your patience, your openness, and for providing the ongoing opportunity to talk about issues related to the PhD project, both on a personal and technical level.

I thank Roman Kräussl for his contribution as a co-promotor. Roman, thanks for your useful guidance on the research track if required. I very much appreciated our private as well as work related conversations. I thank you especially for your contribution to Chapter 3 as a co-author.

None of this would have been possible without a decent education. I thank my former teachers for their ability to share their knowledge. This means teaching staff at the VU University Amsterdam, Tinbergen Institute, and the Duisenberg School of Finance.

Apart from formal interactions related to the thesis, I cannot imagine what life would
be without informal talks with colleagues at the VU University Amsterdam. In addition, special thanks go out to Mahmoud Botshekan for sharing return data to construct some relevant explanatory variables used in Chapter 3. I would like to thank Irma Hindrayanto and Michel van der Wel, especially for their assistance on Latex compilation at the final stage of the research project. More generally, I would like to thank people associated with all institutions mentioned in the previous paragraph for their assistance and kindness along the way (i.e., fellow students, employees).

In terms of external parties, I would like to thank ir. drs. A.C.M. (Toon) de Bakker for providing an internship position at Fortis Bank Nederland, which is now part of ABN AMRO. This has been a very useful learning experience. It has also been a time of meeting great people employed at the department. Moreover, the research conducted at Fortis turned out to be the starting point of the research outlined in Chapter 4. I thank Ivan Bos for his contribution to chapter 5. I would also like to thank my colleagues at ING Bank for showing their interest when I finalized this thesis.

Finally, I am very grateful to my family and friends who have always been there to support me. I especially thank my parents for their unconditional support throughout my (academic) life.

Getting to the end of this acknowledgement, it is not hard for me to conclude that I was, and still am, blessed to be surrounded by great people.
