## Appendix A

### Overview of Software Packages

<table>
<thead>
<tr>
<th>Package</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ACT-R</strong></td>
<td>A cognitive architecture implementing a hybrid approach toward the modeling of cognition (Anderson and Lebiere, 1998). ACT-R constitutes a unified theory of cognition and is based on detailed findings concerning the functioning of human memory and of learning and problem-solving processes, see Section 2.3.2.</td>
</tr>
<tr>
<td><strong>AI-implant</strong></td>
<td>A commercial AI tool that can be used to simulate synthetic entities that make context specific decisions, and move in a realistic fashion within their environment. Its main use is simulating crowd behavior (Presagis, 2009).</td>
</tr>
<tr>
<td><strong>COGNET</strong></td>
<td>A framework for creating and exercising models of human operators engaged in primarily cognitive, as opposed to psychomotor tasks. COGNET’s original use was the development of user models for intelligent interfaces, but it has also been used to model operators and opponents in simulators. The primary assumption underlying COGNET is that humans perform multiple tasks in parallel (Zachary et al., 1992, 1996).</td>
</tr>
<tr>
<td><strong>CoJACK</strong></td>
<td>A recent cognitive architecture that is used in simulation systems to underpin virtual actors, and created by adding a cognitive modeling layer on top of JACK, see below. CoJACK models the structural properties of the human cognitive system and constrains the models that can be implemented therein by only allowing the definition of models that fit within its structural boundaries. It models variation in human behavior by supporting behavior moderators such as stress, morale and fear, each implemented as an overlay (Norling and Ritter, 2004; Evertsz et al., 2008a).</td>
</tr>
<tr>
<td><strong>CLARION</strong></td>
<td>A cognitive architecture that explicitly distinguishes implicit from explicit processes and focuses on capturing the interaction between these two types of processes. It consists of four distinct subsystems: the action-centered subsystem, the non-action-centered subsystem, the motivational subsystem, and the metacognitive subsystem. Each of these subsystems has a dual representational structure, so incorporates implicit as well as explicit representations (Sun, 2002a).</td>
</tr>
<tr>
<td><strong>D-Cog</strong></td>
<td>Distributed Cognition (D-Cog) is a theoretical framework that takes a distributed, socio-technical system rather than an individual mind as its primary unit of analysis. This framework is explicitly cognitive in that it is concerned with how information is represented and how representations are transformed and propagated in the performance of tasks (Hutchins, 1995; Perry, 2003).</td>
</tr>
<tr>
<td><strong>EPIC</strong></td>
<td>A symbolic cognitive architecture developed for modeling human multitask performance, with a main focus on the provision of a detailed account of human perceptual and motor operations. A parsimonious production system is used as a cognitive processor, which is surrounded by separate sensory and motor processors. EPIC assumes that all capacity limitations are a result of limited structural resources, rather than a limited cognitive processor (Kieras and Meyer, 1997).</td>
</tr>
<tr>
<td><strong>JACK</strong></td>
<td>The JAVA Agent Compiler Kernel (JACK) is an extension to JAVA which implements a BDI architecture. It can be used to create a runnable JAVA program that instantiates a BDI agent. The agent’s beliefs are represented with a database, its desires as events that can trigger plans, with these plans representing its intentions (Busetta et al., 2000).</td>
</tr>
<tr>
<td><strong>Jason</strong></td>
<td>An interpreter for an extended version of AgentSpeak (Rao, 1996), a BDI agent-oriented logic programming language. Jason is implemented in Java (Bordini et al., 2007) and forms a BDI agent. The agent’s belief state is the current state of the agent, which is a model of itself, its environment, and other agents. The agent’s desires are the states that the agent wants to bring about based on its external or internal stimuli, while its intentions are active, partially instantiated, plans that the agent adopts in an attempt to achieve its desires.</td>
</tr>
<tr>
<td><strong>Java</strong></td>
<td>An object-oriented, structured, imperative programming language, released in 1995 and originally developed by Sun Microsystems. Java applications are typically compiled to byte code that can run on any Java virtual machine (JVM) regardless of computer architecture.</td>
</tr>
<tr>
<td><strong>Jess</strong></td>
<td>A rule engine and scripting environment written in Java. Using Jess, Java software can be built that has the capacity to ‘reason’, using knowledge in the form of declarative rules (Friedman-Hill, 2003).</td>
</tr>
<tr>
<td><strong>LeadsTo</strong></td>
<td>A language and software environment developed to model and simulate dynamic processes in terms of both qualitative and quantitative concepts. Dynamic processes are modeled by specifying the temporal dependencies between state properties in successive states. The LeadsTo language is a declarative order-sorted temporal language, extended with quantitative means. The software environment performs simulations of LeadsTo specifications, generates simulation traces for further analysis, and constructs visual representations of traces. (Bosse et al., 2007).</td>
</tr>
<tr>
<td><strong>PMFserv</strong></td>
<td>An agent-based architecture with the flexibility to act as meta-level emotional arbitrator for others’ cognitive architecture, or to provide a fully functional stand-alone system to simulate human decision-making. It provides a framework that permits examining the impacts of stress, culture, and emotion upon decision-making, and is mainly used to simulate crowd behavior (Silverman et al., 2006).</td>
</tr>
<tr>
<td><strong>Prolog</strong></td>
<td>A declarative, logic programming language, originally designed by Alain Colmerauer in 1972.</td>
</tr>
<tr>
<td><strong>Soar</strong></td>
<td>A symbolic cognitive architecture based on a production system and proposed by Newell (1990) as ‘a candidate unified theory’. Soar implements goal-directed behavior as a search through a problem space, for which at each cycle first the current state is elaborated on, after which a decision is made which production rule (operator) may fire, see Section 2.3.2.</td>
</tr>
<tr>
<td><strong>VBS2</strong></td>
<td>Virtual Battlespace 2 is an interactive, three-dimensional training system providing a synthetic environment suitable for a wide range of military (or similar) training and experimentation purposes. VBS2 offers both virtual and constructive interfaces onto high-fidelity worlds and is used for mission rehearsal, tactical training and simulated combined arms exercises (Bohemia Interactive Australia, 2009).</td>

Bibliography

10(3,4):137–150.

Dankwoord

Nu mijn proefschrift af is zijn er mensen die me geïnteresseerd de notoire vraag stellen: “Waar zie je jezelf over vijf jaar?” Als deze vraag me vijf jaar geleden gesteld was, dan had ik waarschijnlijk geantwoord met een beeld dat overeenkomt met mijn huidige situatie: gepromoveerd en aan het werk bij een leuk wetenschappelijk onderzoeksinstiutuut. Wat ik vijf jaar geleden niet had kunnen bedenken zijn de mensen, die ik in die periode zou ontmoeten en de inzichten, die ik op zou doen.

Allereerst wil ik de twee mensen bedanken die mij gedurende het hele traject hebben begeleid: mijn promotor Jan Treur van de Vrije Universiteit en mijn co-promotor Karel van den Bosch van TNO. Van Jan heb ik, met vallen en opstaan, geleerd dat je wetenschappelijk onderzoek niet alleen hoeft te doen. De Annerieke die binnenkwam dacht vooral aan te moeten tonen dat ze zelf in staat was tot allerlei grootse zaken; mijn huidige ik ziet veel meer het belang van goede samenwerking en hoe je samen verder komt dan alleen. Karel is degene die mij vanaf het begin heeft ondersteund op een manier die ik als van een vader zou willen omschrijven. Altijd betrokken, met oog voor niet alleen de wetenschappelijke kant van mijn onderzoek, maar vooral ook voor mij. Daarnaast heb ik veel geleerd van Karels kritische blik ten opzichte van geschreven tekst. Als u dit proefschrift goed leesbaar vindt, dan weet u wie hiervoor te danken.

Als derde wil ik Catholijn Jonker bedanken en niet alleen voor haar rol als lid van de leescommissie. Toen ik op een gegeven moment tijdens mijn promotietraject niet zag hoe ik de eindstreep zou kunnen bereiken was het haar chargerende opmerking in de trant van ‘misschien kan je er beter mee stoppen’ die me liet voelen dat dat geen optie was. Het is mede aan haar coaching te danken dat dit proefschrift nu voor u ligt. Ook Michel Klein, mijn tweede co-promotor, heeft daaraan bijgedragen. Ik waardeer Michel erg voor de betrokkenheid waarmee hij zich opgesteld heeft, ondanks dat hij pas laat bij mijn promotie betrokken is geraakt. In dit rijtje wil ik ook Egon van den Broek noemen die mij juist in de beginperiode begeleid heeft en vanuit zijn doelgerichtheid een inspirerend voorbeeld was.
Naast Jan en Michel wil ik alle co-auteurs bedanken van de papers die in dit proefschrift zijn opgenomen: Fiemke Griffioen-Both, Rianne van Lambalgen, Tijmen Muller, Tina Mioch en Willem van Doesburg. Fiemke en Tina, ik had me geen betere masterstudenten kunnen wensen.

I am very grateful to the members of the reading committee: Catholijn Jonker, Cristiano Castelfranchi, Frank van Harmelen, Johan Hoorn, John-Jules Meyer, Mark Neeerinck, and Wayne Gray. Thank you for spending some of your precious time on reading my dissertation, and on providing me with valuable comments.

Dit proefschrift was er niet geweest zonder de samenwerking tussen de VU en TNO die mij in staat heeft gesteld wetenschappelijk onderzoek te doen voor een concrete toepassing. Ik ben altijd dankbaar geweest voor deze promotieconstructie waarbij ik naast vier dagen op TNO, gemiddeld ook een dag in de week op de VU werkzaam was.

Van de VU wil ik alle collega’s van de AI afdeling en vooral van de Agent Systems Research groep bedanken voor de gezelligheid tijdens mijn dagen daar, alsook tijdens conferenties in het buitenland. Vanuit de beginperiode wil ik met name Alexei Sharpaniskykh, Mark van Assem, Mark Hoogendoorn, en Tibor Bosse bedanken; voor het einde ‘de dames’. Via de VU heb ik ook deelgenomen aan SIKS, the School for Information Knowledge Systems. Alle sprekers die daar cursussen hebben gegeven en medepromovendi met wie ik eindeloos nageborreld en geweerwolfd heb: bedankt.

Van TNO wil ik vooral alle (voormalige) collega’s van de afdeling Training en Instructie bedanken, waaronder in het bijzonder Anne Helsdingen, Jan Lubbers, Maaike Harbers, Nicolet Theunissen, Rob Verkuyl, Tijmen, Tina en op nummer 1 mijn paranimf Willem met wie ik vijf jaar lang zoveel meer dan een kamer heb gedeeld. Ook wil ik alle medepromovendi van TNO bedanken voor de gezellige etentjes en waardevolle gesprekken. Van die groep wil ik Peter-Paul van Maanen extra bedanken: ik had nooit zoveel van Amerika gezien als ik naast het kaartlezen ook de auto had moeten besturen.

Als laatste dank aan iedereen die hier niet expliciet genoemd staat, maar met wie ik de afgelopen jaren heb gelachen en een fijne tijd heb gehad.

Vijf jaar geleden had ik weinig zicht op hoe alles zou gaan lopen en wat mij zou brengen tot waar ik nu ben. Eén ding had ik op dat moment gelukkig wel al kunnen benoemen: de onvoorwaardelijke steun van mijn familie. MaPa, dank voor alle luisterende oren, peptalks, lieve kaartjes, bloemen-uit-de-bloementuin-meebrengende bezoekjes en heerlijke maaltijden-met-groenten-uit-de-groentetuin-gevulde Needse weekendjes. Het is fantastisch om me gekend en zo geliefd te weten. Henk Jan en Marike, prachtstel dat jullie zijn, ik hoop dat wij nog lang van elkaar mogen genieten. Jantine, dearest sister, wat ben ik toch blij met jou. Dr. worden is mooi, maar zussen zijn het allermooist.

2009-09 Benjamin Kanagwa (RUN) Design, Discovery and Construction of Service-oriented Systems
2009-10 Jan Wielemaker (UV A) Logic programming for knowledge-intensive interactive applications
2009-11 Alexander Boer (UVA) Legal Theory, Sources of Law & the Semantic Web
2009-12 Peter Massuthe (TUE) Operating Guidelines for Services
2009-13 Steven de Jong (UM) Fairness in Multi-Agent Systems
2009-14 Maksym Korotkiy (VU) From ontology-enabled services to service-enabled ontologies (making ontologies work in e-science with ONTO-SOA)
2009-15 Rinke Hoekstra (UVA) Ontology Representation - Design Patterns and Ontologies that Make Sense
2009-16 Fritz Reul (UvT) New Architectures in Computer Chess
2009-17 Laurens van der Maaten (UvT) Feature Extraction from Visual Data
2009-18 Fabian Groffen (CWI) Armada, An Evolving Database System
2009-19 Valentin Robu (CWI) Modeling Preferences, Strategic Reasoning and Collaboration in Agent-Mediated Electronic Markets
2009-20 Bob van der Vecht (UU) Adjustable Autonomy: Controlling Influences on Decision Making
2009-21 Stijn Vanderloooy (UM) Ranking and Reliable Classification
2009-22 Pavel Serdyukov (UT) Search For Expertise: Going beyond direct evidence
2009-23 Peter Hofgesang (VU) Modelling Web Usage in a Changing Environment
2009-24 Annerieke Heuvelink (VU) Cognitive Models for Training Simulations
