1 INTRODUCTION ......................................................... 1
  1.1 INVERSE MODELS ................................................. 2
  1.2 ESTIMATION PROCEDURES ................................. 5
  1.3 ASYMPTOTIC BEHAVIOR ................................. 10
  1.4 OUTLINE ......................................................... 13

DECONVOLUTION

2 THE ESTIMATOR ......................................................... 17
  2.1 DEFINITION OF THE MLE ................................... 18
  2.2 CHARACTERIZATION ........................................... 23
  2.3 COMPUTATION ................................................... 25

3 CONSISTENCY RESULTS ........................................... 29
  3.1 CONSISTENCY OF \( \hat{F}_n \) AND \( \hat{h}_n \) .............. 30
  3.2 AN ASYMPTOTIC PROPERTY OF \( \hat{S}_n \) ...................... 36
  3.3 TECHNICAL LEMMA ............................................ 40

4 SOME RATE RESULTS ........................................... 41
  4.1 GLOBAL RATES OF CONVERGENCE ......................... 42
  4.2 THE FENCHEL PROCESS .................................... 47
  4.3 LOCAL RATES OF CONVERGENCE ......................... 49
  4.4 PROOFS AND TECHNICAL LEMMAS ......................... 59
5 Limit Distribution ........................................ 79
  5.1 Pointwise Limit Distribution ....................... 80
  5.2 Conjecture 5.1.2 .................................... 87
  5.3 Proofs and Technical Lemmas ...................... 102

Appendix

A The Resolvent $\varrho$ .................................. 117
B Empirical Processes ................................. 123
C Various Entropies .................................. 127
D Consistency of $\hat{F}_n$ ........................... 131

Bibliography ............................................. 139

Summary .................................................. 143
Samenvatting ........................................... 145
Curriculum Vitae ....................................... 147
