Contents

Chapter 1  
General Introduction  
page 11 – 34

Chapter 2  
Immunohistochemical profiling of caspase signaling pathways predicts clinical response to chemotherapy in primary nodal diffuse large B-cell lymphomas  
*Blood.* 2005;105:2916-2923  
page 35 – 44

Chapter 3  
A highly sensitive flow cytometric method for functional analysis of the apoptosis pathways in isolated lymphoma cells and related hematopoietic cells  
*Submitted for publication*  
page 45 – 58

Chapter 4  
Inhibition of the intrinsic apoptosis pathway downstream of caspase 9 activation is a cause for chemotherapy resistance in diffuse large B-cell lymphoma  
*Clin Cancer Res.* 2007;13:7012-7021  
page 59 – 70

Chapter 5  
Small-molecule XIAP antagonist restores caspase-9 mediated apoptosis in XIAP-positive diffuse large B-cell lymphoma cells  
*Blood.* 2008;111:369-375  
page 71 – 78
Chapter 6
Human soluble TRAIL/Apo2L induces apoptosis in a subpopulation of chemotherapy refractory nodal diffuse large B-cell lymphomas, determined by a highly sensitive in vitro apoptosis assay
*Br J Haematol.* 2006;134:283-293

Chapter 7
Chemotherapy-refractory diffuse large B-cell lymphomas (DLBCL) are effectively killed by CD20 antibody-induced complement-mediated cytotoxicity
*Submitted for publication*

Chapter 8
Discussion and future perspectives
*Submitted for publication*

Chapter 9
Summary en Samenvatting
