## Contents

### Introduction and Outline of the thesis

1. Plasma volume and blood pressure regulation in hypertensive pregnancy

### Part I  The Randomized trial: 
**Preeclampsia Eclampsia TRial Amsterdam (PETRA)**

2. A randomized controlled trial comparing two temporizing management strategies, one with and one without plasma volume expansion, for severe and early-onset preeclampsia

3. A randomized trial of plasma volume expansion in hypertensive disorders of pregnancy: influence on the pulsatility indices of the fetal umbilical artery and middle cerebral artery

4. One year infant outcome in women with early-onset hypertensive disorders of pregnancy

### Part II  Cohort analyses

5. Psychosocial impact of early-onset hypertensive disorders and related complications in pregnancy

6. Prediction of maternal complications and adverse infant outcome at admission for temporizing management of early-onset severe hypertensive disorders of pregnancy

7. Dynamics and incidence patterns of maternal complications in early onset hypertension of pregnancy

8. Relationship between thrombophilic disorders and type of severe early onset hypertensive disorder of pregnancy
9. General Movements in infants born from mothers with early-onset hypertensive disorders of pregnancy in relation to one year’s neurodevelopmental outcome

**Part III Pathophysiological study**

10. Hemodynamic changes in the second half of pregnancy: a longitudinal, non-invasive study with thoracic electrical bioimpedance

11. The maternal circulation in early-onset hypertensive disorders of pregnancy; measurements with the thoracic electrical bioimpedance technique

**Part IV General Discussion and Summary**

- General Discussion
- Summary,
  Samenvatting en Samenvatting voor niet-medici (Nederlands)
