List of publications

I wish to express my sincere gratitude to Rienk van Grondelle, Jan Dekker, the VU Laser Center, and the FOM for providing me the opportunity and excellent facilities to do the research presented in this thesis and to participate in instructive courses. I would like to thank Ivo van Stokkum for his great contribution in the complex target analyses which this thesis contains; Jos Thieme for his technical support during the measurements; Henny van Roon and Sandrine D’Haene for their help in sample preparation; Janne Ihalainen for teaching me the experimental and data analysis techniques; Jan Dekker for careful judgement and correction of my texts; and all the people with whom I collaborated and made it possible for me to write this thesis.
