I would like to express my gratitude to all those who gave me the possibility to complete this thesis. It was a pleasure for me to combine my knowledge on bioassays and separation methods, which I have gathered at Roche Diagnostics in Mannheim and Roche Pharmaceuticals in Penzberg (Germany), where I worked as a method developer in the laboratory of Dr. Hilke Sudergat. As the initiator of this PhD project she enabled me to spend an exciting time at the university in Amsterdam on a fascinating topic in a competent team of scientists on various areas. At presentations of my PhD progress at Roche it was always nice to exchange ideas with Dr. Jens-Peter Hoelck, Dr. Mark Stahl and his team. Thank you also for the nice conversations at a good dinner in the nice Bavarian countryside.

Next to all staff members at ACAS, I would like to thank my supervisors Hubertus Irth and Wilfried Niessen whose help, stimulating suggestions and encouragement helped me in all the time of research. Henk Lingeman, thank you for your patience, your professional support and for your ideas and discussions.
All other ACAS members, in particular: Arjen de Boer, Jeroen Carol-Visser, Hans Krabbe, Rico Derks and Camiel de Jong, thank you for a good time at the office, the laboratory and the time we spent outside the university.

Also, I would like to thank the following students: Joni Folsche, Dave Khodabux, Ruth Cohen and Jon de Vlieger. I enjoyed very much working with you.

Dick, Klaas and Roald from the workshop: thank you for your help with the specialized equipments, and for fabricating the immunocolumns, packing devices and the column holders.

During my stay in Amsterdam, the local housing problems forced me to move to different housings several times. Because of this, I am familiar with quite some neighbourhoods in Amsterdam by now. Mrs. Hakman and Mrs. Beks, thank you for arranging housing and for providing me very nice opportunities for recreation by enabling to stay in your holiday housings in Texel and Zeeland.

My whole family was always there for me in times of need and whenever I needed motivation. Family de Freese (Osnabrück, Germany) and Paul Hoos (Affaltrach, Germany) played also a very important role here. I would like to give very special thanks to my parents (my father posthumously, my mother in Affaltrach, Germany) who supported me through everything I did.
Although relatively new in my life, Laurina Hoogerheide (from Bal-
sas, Brazil) supported me through the last months of my PhD period
and now lives with me in Berlin. It is really a blessing that we can
be together after you brought me a “short Amsterdam visit” in The
Netherlands. In God, I hope to spend many years with you in happi-
ness and in peace.

Johannes
List of publications

Hoos JS, Damsten MC, de Vlieger JSB, Commandeur JNM, Vermeulen NPE, Niessen WMA, Lingeman H and Irth H

Automated detection of covalent adducts to human serum albumin by immunoaffinity chromatography, on-line solution phase digestion and liquid chromatography - mass spectrometry
Journal of Chromatography B, accepted for publication, 2007

Bruyneel B, Hoos JS, Smoluch MT, Lingeman H, Niessen WMA and Irth H

Trace analysis of proteins using postseparation solution-phase digestion and electrospray mass spectrometric detection of marker peptides
Analytical Chemistry, 2007, 79, 1591-1598

Hoos JS, Sudergat H, Hoelck J-P, Stahl M, de Vlieger JSB, Niessen WMA, Lingeman H and Irth H

Selective quantitative bioanalysis of proteins in biological fluids by on-line immunoaffinity chromatography - protein digestion-liquid chromatography - mass spectrometry
Journal of Chromatography B, 2006, 860, 262-269
