PART II  MACROPHAGES AND (SURGERY INDUCED) COLORECTAL METASTASES: DEVELOPMENT AND THERAPEUTIC STRATEGIES

chapter 4  Introduction Part II: Role of macrophages in surgically induced liver metastases formation

chapter 5  Surgery-induced reactive oxygen species enhance colon carcinoma cell binding by disrupting the liver endothelial cell lining

chapter 6  Experimentally induced liver metastases from colorectal cancer can be prevented by mononuclear phagocyte-mediated monoclonal antibody therapy

chapter 7  Epidermal growth factor receptor as target for monoclonal antibody-mediated phagocytosis of colon carcinoma cells by macrophage

chapter 8  Intravital microscopy identifies antibody-dependent phagocytosis by macrophages as main effector mechanism to prevent development of liver metastases

chapter 9  Therapeutic potential of engineered IgG3 mAb in cancer therapy

chapter 10  General discussion

appendices  Nederlandse samenvatting
