# Table of Contents

1 **Introduction**  
  1.1 OR and health care: a short overview .................. 1  
  1.2 Patient scheduling problems .......................... 7  
  1.3 Available methods .................................. 10  
  1.4 Outline of this thesis ............................... 12  

2 **Outpatient appointment scheduling**  
  2.1 Literature ........................................... 15  
  2.2 The case with punctual patients ...................... 18  
    2.2.1 Multimodularity and local search ................. 24  
    2.2.2 Complexity .................................... 29  
    2.2.3 Numerical experiments .......................... 30  
  2.3 Adding early and late arrivals ....................... 37  
    2.3.1 Optimisation via simulation ..................... 39  
    2.3.2 Random search algorithm ....................... 42  
    2.3.3 Numerical experiments .......................... 44  
  2.4 Conclusions ........................................ 45  

3 **Elective admission scheduling**  
  3.1 Variability in scheduled admissions .................. 51  
  3.2 Impact of time-dependent admissions .................. 56  
  3.3 Scheduling elective admissions ....................... 61  
  3.4 Practical implications and discussion .............. 68  
  3.5 Phase type LOS and feed forward networks .......... 70  

4 **Admission control for health care**  
  4.1 Model formulation .................................... 80  
  4.2 Home care: state space aggregation .................. 82  
    4.2.1 The case with no waiting room ................. 85  
    4.2.2 The general case with a waiting room .......... 86  
    4.2.3 Numerical experiments .......................... 91  
  4.3 Rehabilitation model: Approximate Dynamic Programming 94  
    4.3.1 Numerical results ............................. 97  
  4.4 Alternative: stochastic programming approach ....... 100
**Table of Contents**

4.4.1 Stochastic programming formulation ........ 100  
4.4.2 Numerical Examples .......................... 106  
4.5 Conclusions and further research ............... 110  

5 Time constraints in emergency departments 115  
5.1 Analysis of a single queue ...................... 116  
5.1.1 Dynamic programming ........................ 117  
5.1.2 Performance analysis ....................... 118  
5.1.3 The value function ........................... 120  
5.2 One-step policy improvement ..................... 124  
5.2.1 Numerical examples ......................... 128  
5.3 Conclusions and directions for further work ..... 129  

6 Conclusions 131  

Bibliography 133  

Samenvatting (Dutch Summary) 143
