## CONTENTS

**Chapter 1:** General introduction 7

**Chapter 2:** Genetic markers of clinical Multiple Sclerosis phenotype

- **2.1:** Analysis of multiple candidate genes in association with phenotypes of multiple sclerosis. 27
- **2.2:** Relevance of IL7R genotype and mRNA expression in Dutch patients with multiple sclerosis. 45
- **2.3:** No influence of KIF1B on neurodegenerative markers in multiple sclerosis. 61

**Chapter 3:** Genetic markers of lesion distribution in Multiple Sclerosis

- **3.1:** HLA-DRB1*1501 and spinal cord magnetic resonance imaging lesions in multiple sclerosis. 71
- **3.2:** Genetic correlations of brain lesion distribution in multiple sclerosis: an exploratory study. 85

**Chapter 4:** Spinal cord MRI in predicting diagnosis and prognosis of Multiple Sclerosis

- **4.1:** Spinal cord lesions in CIS patients: a powerful tool in diagnosis and prognosis. 107
- **4.2:** Relevance of spinal cord pathology on clinical disability: MRI findings in a large cohort of multiple sclerosis patients. 123

**Chapter 5:** Discussion and Future Perspectives 145

**Chapter 6:** Samenvatting 165
- Dankwoord 171
- Biografie 175
- List of publications 177
- Author affiliations 179
- List of abbreviations 181

**Appendix:** Colour figures 185
