Contents

I. Introduction

Page 9 Chapter 1 Introduction and outline of the thesis.

Page 19 Chapter 2 Radiation oncology: overview and recent advances.

II. Imaging and treatment planning

Page 37 Chapter 3 Developing a methodology for three-dimensional correlation of PET-CT images and whole-mount histopathology in non-small-cell lung cancer.

Page 54 Chapter 4 Imaging for stereotactic spine radiotherapy: clinical considerations.

III. Treatment delivery and immobilization

Page 78 Chapter 6 Volumetric modulated arc therapy versus conventional intensity modulated radiation therapy for stereotactic spine radiotherapy: a planning study and early clinical data.

Page 92 Chapter 7  An analysis of patient positioning during stereotactic lung radiotherapy performed without rigid external immobilization. 
*Radiother Oncol* 2012;104:28-32.

IV. Imaging after treatment

Page 105 Chapter 8  Radiological changes after stereotactic radiotherapy for stage I lung cancer. 

Page 124 Chapter 9  Early metabolic response evaluation after stereotactic radiotherapy for lung cancer: pilot experience with 18F-fluorodeoxyglucose positron emission tomography-computed tomography. 

V. Implementation of new technologies

Page 137 Chapter 10 Practical considerations arising from the implementation of lung stereotactic body radiation therapy (SBRT) at a comprehensive cancer center. 

Page 188 Chapter 12 Implementing new radiotherapy techniques. 

Page 221 Chapter 14 General discussion and future directions.
