Table of contents

Chapter 1  11
General introduction

Chapter 2  29
Factors affecting gross efficiency in cycling

Chapter 3  45
The between and within day variation in gross efficiency

Chapter 4  67
How to measure anaerobic capacity?
Chapter 4A  69
The maximal accumulated oxygen deficit method: a valid and reliable measure of anaerobic capacity?
Chapter 4B  101
Anaerobic capacity: effect of computational method?

Chapter 5  121
Is gross efficiency lower at acute simulated altitude than at sea level?

Chapter 6  137
Estimating gross efficiency during and after high intensity exercise
Chapter 6A  139
An approach to estimating gross efficiency during high intensity exercise
Chapter 6B  147
Changes in gross efficiency in relation to time trial length

Chapter 7  169
The association between changes in speed skating technique and changes in skating velocity during World Cup races
Chapter 7A  171
Changes in speed skating velocity are related to changes in effectiveness of the push-off
**Chapter 7B**  
The association between changes in speed skating technique and changes in skating velocity

**Chapter 8**  
General discussion

**Summary**

**Samenvatting (Dutch summary)**

**Dankwoord (acknowledgments)**
