## Contents

1 **General introduction**  
1.1 **Background**  
   1.1.1 A short introduction to the remote sensing of soil moisture  
   1.1.2 A short introduction to uncertainty estimation  
1.2 **Rationale and motivation**  
1.3 **The structure of this thesis**  

2 **The retrieval and validation of geophysical variables from passive microwave observations**  
2.1 An introduction to passive microwave observations  
2.2 **Retrieval algorithms**  
   2.2.1 The Land Parameter Retrieval Model  
2.3 **Validation techniques**  
   2.3.1 Ground based observations  
   2.3.2 Comparison of other products  
   2.3.3 \textit{R}_\text{value} method  
   2.3.4 Triple Collocation  
   2.3.5 Unsaturated zone modelling  

3 **Soil moisture retrievals from the WindSat space-borne polarimetric microwave radiometer**  
3.1 **Introduction**  
3.2 **Materials and methods**  
   3.2.1 Relevant characteristics of passive microwave observations  
   3.2.2 Soil temperature algorithm  
3.3 **Comparing and adjusting satellite observations**  
3.4 Results and discussion  
3.5 Summary and conclusions  

4 **An inter-comparison of remotely sensed soil moisture products at various spatial scales over the Iberian Peninsula**  
4.1 **Introduction**  
4.2 **Data sources**  
   4.2.1 Soil moisture from passive microwave observations  
   4.2.2 Soil moisture from active microwave observations  
   4.2.3 Soil moisture from thermal infrared observations  
4.3 **Methods**  
   4.3.1 Study area
4.3.2  Inter-comparison and validation of products 44
4.3.3  Enhanced spatial resolution from passive microwave observations 45
4.4  Results and discussion 45
  4.4.1  In situ comparison 45
  4.4.2  Remote sensing products cross-correlation analysis 48
4.5  Conclusions 50

5  Error estimates for NRT soil moisture as derived from the LPRM 52
  5.1  Introduction 52
  5.2  Materials and methods 53
    5.2.1  Passive microwave observations 53
    5.2.2  LPRM 53
    5.2.3  Errors of the input 53
  5.3  Analytical derivation of the radiative transfer equation 54
  5.4  Results 56
  5.5  Discussions and conclusions 59

6  The impact of LST on soil moisture anomaly detection from passive microwave observations 60
  6.1  Introduction 60
  6.2  Data 62
    6.2.1  Passive microwave observations 62
    6.2.2  MERRA data 63
    6.2.3  Precipitation data 63
    6.2.4  Scatterometer data 64
    6.2.5  Data selection 64
  6.3  LST scenarios 65
    6.3.1  Ka-band scenarios 65
    6.3.2  MERRA scenarios 65
  6.4  Results and discussion 67
    6.4.1  Cross verification 67
    6.4.2  Ka-band scenarios 68
    6.4.3  MERRA scenarios 71
  6.5  Conclusions and outlook 73

7  Epilogue 75
  7.1  Perspective and achievements 75
  7.2  Ongoing activities 78
  7.3  Follow on research 79
