
TABLE OF CONTENTS

CHAPTER 01

Introduction	11
Aim of thesis	37

CHAPTER 02

Design and pharmacological characterization of VUF14480, a covalent partial agonist that interacts with cysteine _{3.36} of the human histamine H ₄ receptor.	41
--	----

CHAPTER 03

Analysis of multiple histamine H ₄ receptor compound classes uncovers Gα _i protein- and β-arrestin ₂ -biased ligands.	63
--	----

CHAPTER 04

Detailed analysis of biased histamine H ₄ receptor signalling by JNJ7777120 analogues.	85
---	----

CHAPTER 05

Biochemical and cell-based fragment screening identifies novel agonists, antagonists and biased ligands for the histamine GPCR family.	105
--	-----

CHAPTER 06

Development of a profiling strategy for metabolic mixtures of histamine H ₄ receptor ligands by combining chromatography and mass spectrometry with cell-based GPCR signalling.	133
--	-----

CHAPTER 07

Discussion and Conclusion	149
---------------------------	-----
