Contents

1 General introduction ........................................ 5
   1.1 Earth, civilization and soil .............................. 5
   1.2 Soil ecology ........................................... 6
   1.3 Crop innovation & genetic modification .................. 9
   1.4 Environmental Risk Assessment .......................... 10
   1.5 Design of a decision matrix for novel (GM) crops ....... 12
   1.6 Outline of the thesis ................................... 17

2 Time–related survival effects of two gluconasturtiin hydrolysis products on the terrestrial isopod Porcellio scaber 21
   2.1 Abstract .................................................. 21
   2.2 Introduction .............................................. 22
   2.3 Materials and methods ................................... 24
   2.4 Results and discussion ................................... 29
   2.5 General discussion ....................................... 37

3 Molecular and life–history effects of a natural toxin on herbivorous and non–target soil arthropods 39
   3.1 Abstract .................................................. 39
   3.2 Introduction .............................................. 40
   3.3 Materials and methods ................................... 42
   3.4 Results and discussion ................................... 47
   3.5 Conclusion ............................................... 58

4 Effects of a natural toxin on life–history and gene expression of Eisenia andrei 61
## Contents

4.1 Abstract ............................................. 61  
4.2 Introduction .................................... 62  
4.3 Materials and methods .............................. 63  
4.4 Results and discussion ............................ 69  
4.5 Conclusion ........................................ 80  

5 Biofumigation using a high-sinigrin wild *Brassica oleracea* accession affects beneficial soil invertebrates 83  
5.1 Abstract ............................................. 83  
5.2 Introduction .................................... 84  
5.3 Materials and methods .............................. 86  
5.4 Results ............................................ 91  
5.5 Discussion ........................................ 100  

6 Exposure of soil ecosystem engineers through toxin–containing litter does not affect soil processes 105  
6.1 Abstract ............................................. 105  
6.2 Introduction .................................... 106  
6.3 Materials and methods .............................. 108  
6.4 Results ............................................ 115  
6.5 Discussion ........................................ 121  

7 Soil ecotoxicology of *Brassica oleracea* genetically modified in glucosinolate concentrations 131  
7.1 Abstract ............................................. 131  
7.2 Introduction .................................... 132  
7.3 Materials and methods .............................. 134  
7.4 Results ............................................ 138  
7.5 Discussion ........................................ 145  

8 General discussion 147  
8.1 Impacts of pure compounds on single soil invertebrate species 147  
8.2 Impacts of GSL–containing plant material on single soil invertebrate species 149  
8.3 Underlying mechanism of toxicity – gene expression under ITC stress 150  
8.4 GM versus non–GM plant material 151
