CONTENTS

PART I - INTRODUCTION
Chapter 1  General introduction and outline of the thesis  11
Chapter 2  The role of heparin and allied compounds in the treatment of sepsis
Chapter 3  Activated protein C in the treatment of acute lung injury and acute
respiratory distress syndrome

PART II – PRECLINICAL STUDIES
Chapter 4  Nebulized antithrombin limits bacterial outgrowth and lung injury in
Streptococcus pneumoniae pneumonia in rats
Crit Care 2009;13:R145  59
Chapter 5  Nebulized anticoagulants limit coagulopathy but not inflammation in
Pseudomonas aeruginosa-induced pneumonia in rats
Shock 2011;36:347-423  77
Chapter 6  Nebulized fibrinolytic agents improve pulmonary fibrinolysis but not
inflammation in rat models of direct and indirect acute lung injury.
PLoS One 2013;8:e55262  91

PART III – CLINICAL STUDIES
Chapter 7  Activated protein C attenuates pulmonary coagulopathy in patients with
acute respiratory distress syndrome
Chapter 8  Randomized clinical trial of activated protein C for the treatment of
patients with acute respiratory distress syndrome
Submitted  123
Chapter 9  Pulmonary effects of red blood cell transfusion in critically ill,
non-bleeding patients
Transfusion Medicine 2010;20:221-226  141
Chapter 10  The effect of blood transfusion on pulmonary permeability in cardiac surgery patients: a prospective multicenter cohort study
Transfusion 2012;52:82-90

PART IV – GENERAL DISCUSSION
Chapter 11  Summary and general discussion

Chapter 12  Nederlandse samenvatting voor niet-ingewijden

PART V – APPENDICES
  Bibliography
  Curriculum vitae
  Acknowledgements
