<tbody>
<tr>
<td>List of abbreviations</td>
<td>9</td>
</tr>
<tr>
<td>1 General Introduction</td>
<td>11</td>
</tr>
<tr>
<td>2 Detrimental dermal wound healing: What can we learn from the oral mucosa?</td>
<td>17</td>
</tr>
<tr>
<td>3 Human macrophage polarization in vitro; maturation and activation methods compared</td>
<td>45</td>
</tr>
<tr>
<td>4 Platelet derived growth factor-CC secreted by M2 macrophages induces alpha-smooth muscle actin expression by dermal and gingival fibroblasts</td>
<td>65</td>
</tr>
<tr>
<td>5 The number of immune cells is lower in healthy oral mucosa compared to skin and does not increase after scarring</td>
<td>81</td>
</tr>
<tr>
<td>6 Models to investigate human wound healing;</td>
<td>97</td>
</tr>
<tr>
<td>A: Development of an in vivo mouse model to study human wound healing</td>
<td></td>
</tr>
<tr>
<td>B: M2 macrophages mediate faster wound closure in a new human ex vivo wound healing model</td>
<td>105</td>
</tr>
<tr>
<td>7 Extracellular matrix components of oral mucosa differ from skin and resemble that of fetal skin</td>
<td>123</td>
</tr>
<tr>
<td>8 General Discussion</td>
<td>139</td>
</tr>
<tr>
<td>9 Nederlandse samenvatting</td>
<td>151</td>
</tr>
<tr>
<td>Dankwoord</td>
<td>159</td>
