Contents

Chapter 1 General Introduction 7

Chapter 2 Objective acoustic–phonetic speech analysis in patients treated for oral or oropharyngeal cancer

Chapter 3 Neural network analysis to assess hypernasality in patients treated for oral or oropharyngeal cancer

Chapter 4 Acoustic–phonetic and artificial neural network feature analysis to assess speech quality of stop consonants produced by patients treated for oral or oropharyngeal cancer

Chapter 5 Objective speech assessment in patients treated for oral or oropharyngeal cancer: validation of a multidimensional speech evaluation protocol
Submitted

Chapter 6 Characterization of speech pathologies in patients after vocal tract surgery for oral or oropharyngeal cancer using artificial neural network classifiers
Submitted

Chapter 7 Associations between voice quality and swallowing function in patients treated for oral or oropharyngeal cancer
Accepted for publication in Supportive Care in Cancer (2013)

Chapter 8 General discussion 165
