CONTENTS

Chapter 1 General introduction and outline of the thesis 9

PART I Biomarkers of infection and its complications 19

Chapter 2 Old and new biomarkers for predicting high and low risk microbial infection in critically ill patients with new onset fever: a case for procalcitonin.
J Infect 2012;64:484-93

Chapter 3 Rising C-reactive protein and procalcitonin levels precede early complications after oesophagectomy.
J Gastrointest Surg 2015;19:613-24

Chapter 4 The diagnostic accuracy of procalcitonin for bacteraemia: a systematic review and meta-analysis.
Clin Microbiol Infect in press

Chapter 5 Changes in circulating procalcitonin versus C-reactive protein in predicting evolution of infectious disease in febrile, critically ill patients.
PLoS One 2013;8:e65564

PART II Biomarkers of ARDS 113

Chapter 6 Albumin rather than C-reactive protein may be valuable in predicting and monitoring the severity and course of acute respiratory distress syndrome in critically ill patients with or at risk for the syndrome after new onset fever.
BMC Pulm Med 2015;15:15

Chapter 7 Serial inflammatory biomarkers of the severity, course and outcome of late onset acute respiratory distress syndrome in critically ill patients with or at risk for the syndrome after new onset fever.
Biomark Med in press

Chapter 8 Summary and future perspectives 155
Samenvatting en toekomstige uitdagingen 167
