Acknowledgements

This thesis has been written with the support of many people. I would like to thank my promotor Jacqueline Broerse for reminding me about my plans for a PhD; she knew I always had that ambition. Thank you for giving me the opportunity to work on the PhD at the Athena Institute. I highly value the scientific input you gave me, while at the same time giving me the freedom to keep the work practice-focused, the way I wanted it to be. I am very grateful to my co-promotor Marjolein Dieleman. She triggered me to get the most out of my findings and showed me new ways of thinking, which has broadened my view and resulted in a great learning experience. Marjolein, I especially would like to thank you for your persistence in our discussions and I hope many are still to follow. I am grateful for the energetic and encouraging support of both of my supervisors.

Even before the involvement of my PhD supervisors, I found myself surrounded by a bunch of smart and enthusiastic researchers involved in REACHOUT. Let me first mention Miriam Taegtmeyer from the Liverpool School of Tropical Medicine, the “founder” of the project. I had the privilege to work with her from the proposal writing stage, and I have learned a lot from her as my “unofficial” supervisor. Thank you very much for your tireless support, it was comforting to find you still online in the late hours! I also would like to thank Korrie de Koning, my colleague from the Royal Tropical Institute (KIT). She has given me the opportunity, being a relatively “newbie” within KIT, to take on this project in 2012. I appreciate the trust you gave me, as well as your guidance and at the same time freedom to allow me to develop the research.

I have been privileged to be part of the “REACHOUT family”. Sally, you have inspired me to dive deeper into some of the social science stuff. This has brought me, as a public health researcher from the start, new perspectives. Thank you very much. Ginge, I thank you for the scientific and moral support you always give me, and for the fun we had in Ethiopia. To my KIT colleagues Hermen and Sumit: thank you very much for your support and patience in discussions regarding the huge literature review we conducted. Also thanks to Mandy Tijm, who assisted me with the extensive reading during the review. I would like to give a special thanks to my colleagues from Ethiopia, particularly Daniel, Aschenaki and Meti, for giving me the opportunity to conduct the context analysis together with you from the beginning till the end. I am very grateful for the space you gave me and the smooth way of working together. We will always remember our muddy trip to Chire, far away in the highlands. The same goes for my colleagues from the Malawi team: Ireen, Kingsley and Lot, thank you for accepting me as part of the team, for the wonderful workshops we had together and the leisure time, being all “Malawians” and fans of the same reggae band (Ma Backs – also quite instrumental in the accomplishment of this thesis).
Acknowledgements

The REACHOUT team is large: I would like to say big thanks to all co-authors and colleagues from the eight involved partners. Our joint meetings were, and continue to be, energizing: there is much space to learn from each other. How great to be part of such a group! Special thanks to Kate for bringing our research to the attention of the global health systems strengthening community. My work would not have been possible without the support of the funder of REACHOUT: the European Commission.

I would also like to thank all my colleagues at KIT for supporting me over the past years. We share the same passion – contributing to better health in low- and middle-income countries – which creates a stimulating environment. This has been instrumental for feeling good and following my vision for this PhD. Special thanks to my colleague and friend Kelsey for the comforting talks and editing large parts of this book.

I would like to mention Joost Ruitenberg, former member of the Board of Directors of KIT and “my” professor at the VU University while conducting my Masters: thank you for guiding me during my studies and career. The path that I followed was often facilitated by you, and I am very grateful for that. I am happy you are part of my thesis committee. I also give special thanks to the other members of the committee: Prof. Dr. Inge Hutter, Dr. Rachel Tolhurst and Prof. Dr. Kaspar Wyss.

This PhD journey was a valuable experience for me. I particularly enjoyed the field work. I thank all research participants, who were willing to share their experiences and opinions. I have learnt a lot from the interviews, focus group discussions, and side talks with community members, traditional leaders, traditional birth attendants, community health workers, supervisors, managers and policy makers. Their stories form the core of my research. I believe that their voices need to be heard to improve community health. It is important to realize we all work on this same goal. Some years ago, before starting this research, I was privileged to work with a great community health team in Mwanza, Malawi, together with my friend Elvi, who brought her knowledge about the community health worker programmes from the Philippines. I was touched by the spirit of community health workers in Mwanza, like our “best performer” Asharn (see cover of this book), who tirelessly worked in his community. I have great respect for these workers, travelling by foot or bike, visiting hard to reach areas to bring health care closer to communities, with compassion and dedication.

I have enjoyed, and still do enjoy, the creative work environment with all people mentioned above. Not much related to the research as such, but very important for my wellbeing and spirit, are family and friends. I am blessed to have wonderful and supportive parents who have shown me how to live. You have encouraged me to follow my heart and supported me in my choices, even if they brought me far away. Thank you very much. My Brother Jan and “asisi” Tjitske, I also thank you for your support, for always being there for me when I felt lonely in my writing process. They invaded my house on the Indischestraat
when they thought I needed to relax or texted me just at the right moment while I was writing in a hotel room (or at an airport) somewhere in the South. To my friends, Paul, Sacha, Diana, Kelsey, Taonga, Chance, Chimz, Simone, Aniek, Reintje, Sandra, Wyson, Meti, Chavinda, King, Andy and Rose and the kids, the four Mwanza Malawi friends, Delphine, Esther, Gulsum, Leslie and Katya: your friendship means a lot to me. Thanks for making me feel surrounded with love whether in the Netherlands, Ethiopia or Malawi. My friend Sophie: you are not with us anymore. I miss you and trust our big plans will wait for later times. For the last part of my PhD journey, Saulos, you have always been supporting and encouraging me. It feels so good knowing some special guy is proud of you. I love you.
Maryse Kok graduated in management, policy analysis and entrepreneurship in the health and life sciences, with a specialization in international public health, at the VU University Amsterdam in 2004. She started her career in policy advice in the field of infectious diseases and, later on, sexual and reproductive health and rights at the Dutch Ministry of Health, Welfare and Sport. Having been involved in the development of several international treaties on health and development, she decided to gain more practical experience in the area of public health in developing countries. She worked in Mwanza district, Malawi, in the management and coordination of curative and preventive health services. It was in Malawi where her interest in community health workers started. Together with the district team, she introduced new methods of supervision and performance appraisal, leading to enhanced motivation and performance of community health workers. She joined the Royal Tropical Institute (KIT) in November 2011, and got the opportunity to expand her work on performance of community health workers in the REACHOUT project. This research consortium, led by the Liverpool School of Tropical Medicine, aims to generate knowledge to strengthen the performance of community health workers and other close-to-community health care providers in Bangladesh, Ethiopia, Indonesia, Kenya, Malawi and Mozambique. Her work for this project has resulted in this PhD thesis. Her current activities within KIT can be placed in the broad area of health systems strengthening in low- and middle-income countries. She is particularly involved in research and advice in human resources for health, community health systems and sexual and reproductive health and rights. She teaches health system research in the Master in Public Health/International Course in Health Development at KIT. Her other relevant publications related to this thesis are:
