Acknowledgments

We would like to express our gratitude to Dr. John Doe for his valuable comments and suggestions on the initial draft of this paper. His insights significantly enhanced the quality and coherence of the work. We are also thankful to Dr. Jane Smith for her support throughout the research process. Without their guidance and encouragement, this project would not have been possible. Finally, we extend our appreciation to all the participants in the study for their time and cooperation. Their involvement was crucial in making this research a success.
