## Contents

I  Part I: Prologue  
1  
1  Essentially, all models are wrong, but some are useful  

II  Part II: Fluxes in Biochemical Models  
2  A toolkit for analyzing fluxes in biochemical models: stoichiometric modeling & simulation  
3  Developing Google Maps for metabolic highways  
4  Interplay between constraints, objectives, and optimality for metabolic highways  
5  The TimoTimo: a revolutionary “navigation system” for analyzing metabolic highways  

III  Part III: Fluctuations in Biochemical Models  
6  A toolkit for analyzing fluctuations in biochemical models: stochastic simulation algorithms  
7  Simulating fluctuations in biochemical models with StochPy  
8  Cell growth and division in stochastic simulation algorithms  

IV  Part IV: Epilogue  
9  Discussion and prospects
