Contents

Summary

1 Introduction

1.1 Methane in the Earth atmosphere

1.1.1 Sources of methane

1.1.2 Methane as a greenhouse gas

1.1.3 Atmospheric chemistry involving methane

1.2 Monitoring atmospheric methane concentrations

1.2.1 Assessment of methane emissions

1.2.2 Ground-based observations of the atmosphere

1.2.3 Satellite solar back-scatter radiometers

1.2.4 The GOSAT mission

1.3 A general retrieval scheme

1.3.1 Forward model

1.3.2 Inversion method

1.4 From Earth-radiance to methane concentration

1.4.1 Proxy method

1.4.2 physics-based method

1.5 Objectives and organisation of this thesis

2 Methane retrievals from GOSAT SWIR

2.1 Introduction

2.2 GOSAT measurements

2.3 Retrieval algorithm

2.3.1 Inversion

2.3.2 Proxy retrieval

2.3.3 Physics-based retrieval
