1	Introduction: A Guide to Mechanobiology, where Physics and Biology Meet	15
1.1	Cellular Environments	16
1.2	Contributors to Cellular Mechanosensing	18
1.3	Role of the ECM in Mechanobiology	21
1.3.1	ECM Stiffness	21
1.3.2	Nanotopography	23
1.3.3	Pore Size	23
1.3.4	Dimensionality	24
1.4	Integrins	24
1.4.1	Molecular Basis of Integrin Mechanosensing	25
1.4.2	Role of Integrins in 2D versus 3D Environments	25
1.5	Signaling Pathways	26
1.5.1	Mechanosensitive FA Proteins	26
1.5.2	Rho GTPases	27
1.5.3	Integrin-mediated Regulation of Gene Transcription	28
1.6	The Cytoskeleton (CSK)	29
1.6.1	Actin	29
1.6.2	Microtubules (MTs)	30
1.6.3	Intermediate Filaments (IFs)	31
1.7	The History of Traction Forces	32
1.8	Moving Forward from 2D to 3D	34
1.8.1	3D Model Systems: Fibrin and Collagen Networks	35
1.9	Focus of This Thesis	38
1.10	Acknowledgments	41
2	Hierarchical Strain-Stiffening of Semiflexible Wormlike Bundles: Fibrin as Model System	45
2.1	Introduction	46
2.2	Materials and Methods	48
2.2.1	Fibrin Polymerization	48
2.2.2	Rheology	49
2.2.3	Imaging	50
2.2.4	Turbidity	51
2.2.5	Crosslinking Analysis by SDS-PAGE	51
2.3	Theoretical Framework	52

2.4	Results	54
2.4.1	Varying Bundle Size	54
2.4.2	Rheology of Fine Fibrin Clots	55
2.4.3	Hierarchical Bundle Limit: Physiological Fibrin Coarse Clots	58
2.4.4	Varying Bundle Tightness	63
2.5	Discussion and Conclusion	64
2.6	Acknowledgments	68
2.7	Supplementary Information	69
3	Cells actively stiffen fibrin gels by contractile stress	77
3.1	Introduction	78
3.2	Materials and Methods	79
3.2.1	Fibrin Gel Preparation and Cell Seeding	79
3.2.2	Rheology	81
3.2.3	Microscopy	81
3.3	Results	82
3.3.1	Cell Spreading and Traction Force Generation	82
3.3.2	Rheology of Cell-populated Fibrin Gels	88
3.4	Discussion	92
3.4.1	Cells Stiffen Fibrin Gels by Generating Contractile Pre- stress	92
3.4.2	Mechanistic Origin of Fibrin Gel Stiffening	95
3.4.3	Implications of Cell-induced Stiffening	96
3.5	Conclusion	97
3.6	Acknowledgments	97
3.7	Supplementary Information	99
3.7.1	Supplementary Materials and Methods	99
3.7.2	Movies	101
3.7.3	Supplementary Figures	102
4	Fibrinogen Unfolding During Fibrin Gel Stretching	109
4.1	Introduction	110
4.2	Materials and Methods	113
4.2.1	Fibrin Polymerization	113
4.2.2	Small Angle X-ray Scattering (SAXS) and Tensile Tests	115
4.2.3	Imaging and Analysis of Fiber Alignment	116
4.2.4	Modeling	117
4.3	Interpretation of Scattering of Fibrin Networks	122
4.4	Results	128
4.4.1	Internal Structure of Fibrin at Zero Strain	128
4.4.2	SAXS of Stretched Fibrin Networks	140
4.5	Discussion	154

4.6	Conclusion	157
4.7	Acknowledgments	158
4.8	Supplementary Information	159
5	Microscopic View of Fibrin Blood Clots	167
5.1	Introduction	168
5.2	Materials and Methods	170
5.2.1	Sample Preparation	170
5.2.2	Bead Preparation	170
5.2.3	Macrorheology	171
5.2.4	Imaging	172
5.2.5	Optical Tweezer Measurements	172
5.3	Results	176
5.3.1	Setup Validation	176
5.3.2	Bead Surface Properties Affect Stiffness Measurements inside Fibrin Gels	181
5.3.3	Sticky Beads Inside Fibrin Networks with Large Pores .	189
5.3.4	Calculation of Fibrin Fiber Persistence Length	192
5.4	Discussion	195
5.5	Conclusion	196
5.6	Acknowledgments	197
5.7	Supporting Information	198
6	Architecture and Normal Stress Govern Collagen Network Mechanics	203
6.1	Introduction	204
6.2	Materials and Methods	207
6.2.1	Sample Preparation	207
6.2.2	Rheology	208
6.2.3	Turbidity	209
6.2.4	Imaging	210
6.3	Computational Model of Collagen Network Rheology	211
6.4	Results	213
6.4.1	Impact of Polymerization Conditions on Collagen Elastic Properties	213
6.4.2	Impact of Polymerization Conditions on Collagen Vis- coelastic Properties	219
6.4.3	Impact of Polymerization Conditions on Network Archi- tecture	222
6.4.4	Collagen Mechanics Shows Signatures of Critical Behavior	227
6.4.5	Quantitative Prediction of Collagen Network Stiffness .	235
6.4.6	Normal Force Tunes Network Stiffness	238
6.5	Discussion and Conclusion	240
