# CONTENTS

## Section 1 Introduction
- Chapter 1 General introduction and outline of the thesis

## Section 2 The influence of P-gp on $[^{11}\text{C}]$flumazenil transport across the blood-brain barrier
- Chapter 2.1 $[^{11}\text{C}]$Flumazenil brain uptake is influenced by the blood-brain barrier efflux transporter P-glycoprotein
- Chapter 2.2 Altered $\text{GABA}_A$ receptor density and unaltered blood-brain barrier $[^{11}\text{C}]$flumazenil transport in drug-resistant epilepsy patients with mesial temporal sclerosis

## Section 3 The newly developed P-gp expression tracer $[^{11}\text{C}]$laniquidar
- Chapter 3.1 Radiation dose of the novel P-gp tracer $[^{11}\text{C}]$laniquidar
- Chapter 3.2 Quantification of $[^{11}\text{C}]$laniquidar kinetics in the brain

## Section 4 Central neurotoxicity of anticancer treatment
- Chapter 4.1 Central neurotoxicity in cancer chemotherapy: pharmacogenetic insights
- Chapter 4.2 Central neurotoxicity of standard treatment in patients with newly-diagnosed high-grade glioma. A prospective longitudinal study

## Section 5 Conclusions
- Chapter 5.1 Summary, discussion and future perspectives
- Chapter 5.2 Samenvatting, discussie en toekomstperspectief

## Section 6 Appendices
- Curriculum Vitae
- List of Publications
- Dissertation series
- Dankwoord
