CONTENTS

Chapter 1  General introduction 9

Chapter 2  The value of autopsies in the era of high-tech medicine: discrepant findings persist 19

Chapter 3  The role of histology in forensic autopsies. Is a histological examination always necessary to determine a cause of death? 39

Chapter 4  Diagnosing lymphocytic myocarditis in adult combining the Dallas criteria with immunohistochemical stainings 49

Chapter 5  A new method to determine wound age in early vital skin injuries: a probability scoring system using expression levels of Fibronectin, CD62p and Factor VIII in wound hemorrhage 61

Chapter 6  Analysis of morphological characteristics and the expression of extracellular matrix proteins in skin wounds to determine wound age in living subjects in forensic medicine 77

Chapter 7  Analysis of inflammatory cells and mediators in skin wound biopsies to determine wound age in living subjects in forensic medicine 91

Chapter 8  General discussion 105

Chapter 9  Nederlandse samenvatting (Summary in Dutch) 121
