Preactive Lesions in Multiple Sclerosis

The key to resolving lesion formation

Laura Peferoen
The cover is an adapted design (by R. Stoel – graphic designer proefschriftmaken.nl) from the art work “Twisting a thought” by Laura Harris.

Born in Milwaukee (Wisconsin, USA) Laura Harris was diagnosed with multiple sclerosis in 1985. Despite her physical limitations caused by the disease, Laura is full time artist. Recently she has been focussing on mosaic portrait art, representing a dreaming universe. “Twisting a thought” is one of the mosaic art works created from delicate hand-cut material including: gold, ceramic tiles and natural river stones. The elegant surreal creation of a woman’s back with a cogwheel cloud coming out of her head, can symbolize the complex system of lesion formation in MS as well as the twisting of thoughts a researcher needs to unravel the mystery.

Special thanks to Laura Harris for allowing me to use this beautiful design.

The work described in this thesis was performed at the Department of Pathology of the VU University Medical Centre (Amsterdam, the Netherlands) under supervision of prof. dr. S. Amor and prof. dr. P. van der Valk.

This research project was funded by the Dutch Multiple Sclerosis Research Foundation (MS grant 10-726).

Financial support for printing of this thesis was kindly provided by the Dutch MS research foundation, SouthernBiotech, U-CyTech biosciences and the Vrije Universiteit Amsterdam.
