Publication of this thesis was financially supported by:

Boehringer Ingelheim B.V., Vrije Universiteit Amsterdam, Chipsoft, AstraZeneca

The logo for ChipSoft, featuring the word "ChipSoft" in a blue, italicized serif font. The letters "C", "h", and "i" are connected, as are "S", "o", and "f". A thin blue horizontal line is positioned above the letters "C", "h", and "i".

The research in this thesis was performed at the Department of Pulmonary Diseases of the VU University medical center, Amsterdam, the Netherlands.

VRIJE UNIVERSITEIT

Acquired Resistance to Epidermal Growth Factor Receptor Tyrosine Kinase Inhibitors in Non-Small Cell Lung Cancer

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad Doctor aan
de Vrije Universiteit Amsterdam,
op gezag van de rector magnificus
prof.dr. V. Subramaniam,
in het openbaar te verdedigen
ten overstaan van de promotiecommissie
van de Faculteit der Geneeskunde
op donderdag 8 december 2016 om 9.45 uur
in de aula van de universiteit,
De Boelelaan 1105

door

Justine Leonie Kuiper

geboren te Rheden

promotor: prof.dr. E.F. Smit
copromotor: dr. D.A.M. Heideman

CONTENT

Introduction

- Ch. 1: Introduction and outline of this thesis 9

Diagnostics & response prediction

- Ch. 2: Non-classic *EGFR*-mutations in a cohort of Dutch *EGFR*-mutated NSCLC-patients and outcomes following EGFR-TKI treatment 29
Accepted for publication in British Journal of Cancer
- Ch. 3: Incidence of T790M mutation in (sequential) rebiopsies in *EGFR*-mutated NSCLC-patients 51
Lung Cancer 2014 Jul;85(1):19-24
- Ch. 4: Ch. 4a: Detecting resistance in *EGFR*-mutated NSCLC after clonal selection through targeted therapy 69
Personalized Medicine 2015 Apr;12(2): 63-6
Ch. 4b: Transformation to a squamous cell carcinoma phenotype of an *EGFR*-mutated NSCLC-patient after treatment with an EGFR-tyrosine kinase inhibitor 75
Journal of Clinical Pathology 2015 Apr;68(4):320-1
- Ch. 5: VeriStrat® has prognostic value in advanced stage NSCLC-patients treated with erlotinib and sorafenib 81
British Journal of Cancer 2012 Nov 20;107(11):1820-5

Treatment

- Ch. 6: Challenges in the management of *EGFR*-mutated non-small cell lung cancer patients with acquired resistance to tyrosine kinase inhibitors 97
Oncology 2014;87(2):83-94
- Ch. 7: Treatment and survival of patients with *EGFR*-mutated non-small cell lung cancer and leptomeningeal metastasis: A retrospective cohort analysis 115
Lung Cancer 2015 Sep;89(3):255-61
- Ch. 8: Ch. 8a: High-dose, pulsatile erlotinib in two NSCLC-patients with leptomeningeal metastases – one with a remarkable thoracic response as well 131
Lung Cancer 2013 Apr;80(1):102-5
Ch. 8b: High-dose, weekly erlotinib is not an effective treatment in *EGFR*-mutated non-small cell lung cancer patients with acquired extracranial progressive disease on standard dose erlotinib 139
Adapted from: European Journal of Cancer 2014 May;50(7):1399-401

Ch. 9:	Outcome on afatinib in NSCLC-patients who progressed on prior treatment with erlotinib or gefitinib	153
	<i>In progress</i>	

Discussion

Ch. 10:	Ch. 10a: Summary and future perspectives	165
	Ch. 10b: Dutch summary (Nederlandse samenvatting)	177
	Curriculum Vitae	187
	Dankwoord	189
	List of publications	195
