| **Chapter 2** | No gene-by-environment interaction with 5-HTTLPR in a large Dutch sample  
*The Journal of Affective Disorders 2013* | 25   |
| **Chapter 3** | Association between depression and lower educational attainment not explained by shared genetic effects in ~25,000 individuals  
*Molecular Psychiatry 2015* | 49   |
| **Chapter 4** | Increased polygenic effects on depression in individuals exposed to childhood trauma in the Netherlands Study of Depression and Anxiety  
*The British Journal of Psychiatry 2014* | 85   |
| **Chapter 5** | No interaction between polygenic risk for depression and childhood trauma in 5,765 subjects from the Psychiatric Genomics Consortium  
*In preparation* | 105  |
| **Part B: Methodological aspects of study design, SNP-heritability, power and assortative mating** |                                               |      |
| **Chapter 6** | Disease and polygenic architecture: avoid trio-design and appropriately account for unscreened controls for common disease  
*The American Journal of Human Genetics 2016* | 143  |
| **Chapter 7** | Exploring boundaries for the genetic consequences of assortative mating for psychiatric traits  
*JAMA Psychiatry 2016* | 197  |
| **Chapter 8** | Summary & General discussion                                                                | 241  |
