CONTENTS

1. Introduction 9

PART I: METHODOLOGICAL ASPECTS 26

2. Automated approach for quantifying the repeated sit-to-stand using one body fixed sensor in young and older adults 27

3. Validation of seat-off and seat-on in repeated sit-to-stand movements using a single-body-fixed sensor 37

4. Intra-rater, inter-rater and test-retest reliability of an instrumented Timed Up and Go (iTUG) test in patients with Parkinson’s disease 55

PART II: CLINICAL VALUE 72

5. The Instrumented Sit-to-Stand Test (iSTS) has greater clinical relevance than the manually recorded Sit-to-Stand Test in older adults 73

6. Older adults with low muscle strength stand up from a sitting position with more dynamic trunk use 97

7. A new scoring method to quantify the instrumented Sit-to-Stand test in older adults 115

PART III: ASSOCIATION PHYSICAL PERFORMANCE – PHYSICAL ACTIVITY 136

8. Physical performance and physical activity in older adults: associated but separate domains of physical function in old age 137

PART IV: GENERAL DISCUSSION AND SUMMARY 160

9. General discussion 161

10. Summary / Samenvatting 171

PART V: APPENDICES 174

11. Acknowledgements / Dankwoord 175

12. List of publications 185

13. Curriculum Vitae 191
