Chapter 1
General introduction

Chapter 2
Methods to study differences in cell mobility during skin wound healing in vitro

Chapter 3
Autocrine regulation of re-epithelialization after wounding by chemokine receptors CCR1, CCR10, CXCR1, CXCR2 and CXCR3

Chapter 4
Different wound healing properties of dermis, adipose and gingiva mesenchymal stromal cells

Chapter 5
Comparison of ATMP gingiva and skin substitutes and their in vitro wound healing potentials

Chapter 6
The influence of chronic wound extracts on inflammatory cytokine and histatin stability

Chapter 7
Saliva derived host defense peptides histatin1 and LL-37 increase secretion of antimicrobial skin and oral mucosa chemokine CCL20 in an IL-1α independent manner

Chapter 8
Summarizing discussion
