Chapter 1 General introduction and outline of the thesis

Part 1 In-hospital treatment delay for acute ischemic stroke patients

Chapter 2 Achieving a door-to-needle time of 25 minutes in thrombolysis for acute ischemic stroke: a quality improvement project

Chapter 3 Short door-to-needle times in acute ischemic stroke and prospective identification of its delaying factors

Part 2 Secondary prevention after ischemic stroke and TIA

Chapter 4 Limited efficacy of a long-term secondary prevention program in ischemic stroke and transient ischemic attack patients

Chapter 5 A motivational interviewing-based secondary prevention program to improve risk factor management in ischemic stroke and TIA patients

Chapter 6 Safety and feasibility of post-stroke care and exercise after minor ischemic stroke or transient ischemic attack: MotiveS & MoveIT
