TABLE OF CONTENTS

Chapter 1  General introduction  7
Adapted from:
Primary ciliary dyskinesia: From diagnosis to molecular mechanisms
Journal of Pediatric Genetics (2014); 3(2):115-127
Diagnostic methods in Primary Ciliary Dyskinesia
Paediatric Respiratory Reviews (2016); 18: 8-17

PART I  GENETIC DIAGNOSIS

Chapter 2  Splice-site mutations in the axonemal outer dynein arm docking complex gene CCDC114 cause primary ciliary dyskinesia  35
American Journal of Human Genetics (2013); 92(1): 88-98

Chapter 3  Mutations in PIH1D3 cause X-linked primary ciliary dyskinesia with outer and inner dynein arm defects  55
American Journal of Human Genetics (2017); 100(1):160-168

Chapter 4  Diagnostic yield of a targeted gene panel in Dutch primary ciliary dyskinesia patients  75
Peer review by Human Mutation

PART II  RESPIRATORY MANAGEMENT

Chapter 5  Breathomics in lung disease  101
Chest (2015); 147(1): 224-231

Chapter 6  Exhaled molecular profiles in the assessment of cystic fibrosis and primary ciliary dyskinesia  117
Journal of Cystic Fibrosis (2013); 12(5): 454-460

Chapter 7  A randomised controlled trial on the effect of inhaled hypertonic saline on quality of life in primary ciliary dyskinesia  131
European Respiratory Journal (2017); 49(2). pii: 1601770

Chapter 8  General discussion  149
