ACKNOWLEDGEMENT

First and foremost, my utmost gratitude goes to the Almighty God for giving me this opportunity through his grace to produce the current work. Several people have also contributed to ensuring its success.

I first owe my gratitude to my Promoter Prof. dr. J.F.G. Bunders-Aelen for her support throughout the writing process including the useful feedback through one-on-one, virtual meetings and telephone conversations that have resulted to this work. Prof. Joske always steered me in the right direction to ensure flow of thought and to make sure this piece of work was interesting and intriguing to the reader. This interaction and guidance enhanced my writing skills and enabled me to review other documents (such as books, manuscripts, reports etc) with a view to making the content flow and comprehensible.

I would like to also thank my Co-promoter Prof. David Henderson for the valuable feedback on the manuscripts and thesis, and for agreeing to be my co-promoter despite his busy schedule. Besides my promoter and Co-promoter, I would like to thank all the members of the reading committee for their insightful comments to improve this thesis.

I would also like to acknowledge all staff at Africa Mental Health Foundation (AMHF) for their support in implementing this research work, my fellow students at Vrije Universiteit for the moral support and peer learning, and other co-authors for their assistance in drafting the manuscripts. Most importantly, I wish to thank my parents (Prof. David M. Ndetei and Dr. Victoria N. Mutiso) who have been my greatest role models. Throughout my years of study, they have continuously encouraged me to "push myself" and advance in my academic and career path. I would not have made it without their selfless support.

A special thank you goes to my only brother David Musyimi Ndetei-Junior for his emotional support and late night company as I write this research work.

I also acknowledge my relatives and friends for always checking on my progress and for the encouragement I received to accomplish this work.

My deep gratitude goes to all the participants involved in implementation of this task-sharing model to reduce the huge gap in Kenya, and more particularly for the upcoming generation.

Moreover, this work would not have been successful without the financial support of Grand Challenges Canada (grant number S5_0415-01 under the Stars in Global Health Program) and (grant number 0739-05 under Global Mental Health Program). Grand Challenges Canada is funded by Government of Canada and is dedicated to supporting bold ideas with big impact in global health.
