

TABLE OF CONTENTS

Chapter 1	General introduction	7
Chapter 2	A Novel Method of Orbital Floor Reconstruction Using Virtual Planning, 3-Dimensional Printing, and Autologous Bone	17
Chapter 3	Influence of CT parameters on STL model accuracy	27
Chapter 4	Impact of prone, supine and oblique patient positioning on CBCT image quality, contrast to noise ratio and figure of merit value in the maxillofacial region	43
Chapter 5	CT image segmentation methods for bone used in medical additive manufacturing: A Literature Review	61
Chapter 6	The impact of manual threshold selection in medical additive manufacturing	87
Chapter 7	Accuracy of MDCT and CBCT in three-dimensional evaluation of the upper airway morphology	103
Chapter 8	The accuracy of ultrashort echo time MRI sequences for medical additive manufacturing	117
Chapter 9	General discussion	133
Chapter 10	English summary & Dutch summary	141
Chapter 11	Acknowledgements	153
