Contents

Chapter 1  General introduction and outline of the thesis. 9

Part I: Different myofilament remodeling and function between patient groups

Chapter 2  Peripartum cardiomyopathy and dilated cardiomyopathy: Different at heart.
            Frontiers in Physiology (2015) 27

Chapter 3  Myofilament remodeling and function is more impaired in peripartum cardiomyopathy compared to dilated cardiomyopathy and ischemic heart disease.
            The American Journal of Pathology (2017) 47

Chapter 4  Cardiomyocyte hypocontractility and reduced myofibril density in pediatric cardiomyopathy.
            Submitted 77

Part II: Pathogenic effects of mutations in dilated cardiomyopathy

Chapter 5  A mutation in the glutamate-rich region of RNA-binding motif protein 20 causes dilated cardiomyopathy through missplicing of titin and impaired Frank-Starling mechanism.
            Cardiovascular Research (2016) 99

Chapter 6  Lamin A/C-related cardiac disease: Late onset with a variable and mild phenotype in a large cohort of patients with the LMNA p.(Arg331Gln) founder mutation.
            Circulation Cardiovascular Genetics (2017) 127

Chapter 7  Genotype-specific pathogenic effects in human dilated cardiomyopathy.
            Journal of Physiology (2017) 169

Part III: Discussion and summary of thesis

Chapter 8  Summary of thesis and future perspectives. 199

Chapter 9  Nederlandstalige samenvatting. 217

Appendix  Curriculum vitae. 226

List of publications. 228
