

Acknowledgements

A dissertation is no solitary effort. Over the course of this PhD, countless people have inspired, supported and improved this work. It has been an amazing journey and I sincerely thank each and all of you who have eased the way! First off, I want to thank my supervisors, Jan-Willem van Prooijen, Francesca Righetti, and Paul Van Lange. I deeply appreciate the way you have guided me in this process – finding a balance between letting me explore topics outside of the direct scope of my dissertation and at the same time curbing my enthusiasm so that I don't get too carried away. It was an incredibly rewarding endeavor to explore this unknown scientific terrain of social psychology of corruption together with such an amazing team of experts. I also want to sincerely thank the NWO for funding this project and enabling us to do this work. Dank je wel and grazie mille!

A big “Thank you!”, to all the great colleagues from the Department of Experimental and Applied Psychology at the VU Amsterdam. Whether it was over lunch, at the annual mini-conference or while having a beer at one of the Borrels, it has always been a pleasure to exchange ideas with you. Special thanks to my roommates, Ali Mashuri, Hannah Moore, Junhui Wu, Katherina Alvarez, Michael Laakasuo, Robert Meershoek and Zoi Manesi. Gracias, σας ευχαριστώ, 谢谢, dank je, terima kasih and kiitos, for enduring my repeated trips to the whiteboard with such patience and all the coffees that alleviated the bumps in the road to the PhD. I want to thank all the great co-authors that I have had the pleasure to write papers, articles and book chapters with. You have taught me countless tricks and tips! I also want to thank the Bachelor, Master and Research Master students that I have supervised over the past years – I hope you keep your curiosity and creativity going!

During my PhD, I was fortunate enough to spend a month at the Department of Economics of the University of Zürich. I want to thank all colleagues at the chair of Ernst Fehr that I got to meet during that time. Special thanks to Sonja Vogt and Charles Efferson for inviting me! You have opened the door to economics for me, taught me a lot about how to

design and run experiments, for instance, the fact that corruption games do not only emerge out of coffee-induced brainstorming sessions but can be mathematically calculated. Merci vilmal, thank you very much and vielen Dank! I also had the privilege to visit several conferences and workshops to present this work, and have received feedback that was immensely valuable. Thanks to all the fascinating people I got to meet in Amsterdam, Bonn, Berlin, Düsseldorf, Duisburg, Hannover, Helsinki, Hong Kong, Kiev, Lisbon, Leiden, New York, Passau, Prague, Zeist and Zürich. I appreciate the encounters that these trips have enabled me to experience!

Special thanks to the German-speaking corruption research colloquium, KorrWiss. Meeting you has really been like discovering a treasure. I want to express my special gratitude to Anna Schwickerath, Annika Engelbert, Oksana Huss, Corinna Martin and the Volkshotel staff for helping me to organize the first Interdisciplinary Corruption Research Forum in Amsterdam. I didn't expect that organizing a conference can actually be so much fun! It is amazing to see that our goal of bringing together (young) scholars working on corruption from different disciplines has resulted in the founding of the Interdisciplinary Corruption Research Network. It is an honor to be one of the founding members along such a great group of dedicated corruption researchers. Thank you, Danke, спасиби obrigado, and merci to Anna Schwickerath, Annika Engelbert, Corinna Martin, Ina Kubbe, Jessica Flakne, Oksana Huss, Steven Gawthorpe and Sofia Wickberg as well as the professors who volunteered to be on our advisory board, namely, Bo Rothstein, Janine Wedel, Jean Ensminger, Johann Graf Lambsdorff, Paul Heywood and Luis de Sousa. I look forward to all the exciting endeavors on the horizon together!

I also want to thank my new colleagues at the Department of Economics and Business and CREED at the University of Amsterdam – and its foosball table. I would like to express my special gratitude and a big תודה to Shaul Shalvi – as well as thank the “Moral-lab” crew

and my roommates: Ivan Soraperra, Maël Lebreton, Margarita Leib and Suzanna Berg. It's great to be your colleagues! I have learned a lot from you already and look forward to our joint work in the future.

I want to send a heartfelt 'kiitos' up North to Finland addressing Michael Laakasuo for being a great friend, science-sparring partner, and for inviting me to be part of the Helsinki challenge team. It was an amazing experience to work with you, Jussi Palomäki, Marianna Drosinou, and Markus Jokela on the fascinating topic of *Morality of Intelligent Machines*. A little further South in Denmark, I want to send a 'mange tak' to Kristian Mølberg for the great cover design of this dissertation and all the conversations. Let's keep the bridge between science and art alive! Speaking of art, much of this work has been written while listening to music. I don't want to bore the reader with all the musicians (I happily provide the famous 'Flöz' playlist upon request), so let me just briefly thank my personal PhD Top 5 – Christian Löffler, Martin Kohlstedt, Kanye West, N'to and Nils Frahm – for making music that helps me get to work, concentrate and think!

Some of these musicians – and countless other nuggets – I only got to know through the constantly refreshing exchange with my two "Paranimfen", Chris Starke and Cyril Brandt. It is an tremendous privilege to know that you have my back, not just during the dissertation defense! I am extremely grateful that this work bears the hallmarks of our "Mind-Capoeira"-approach. Another huge "thank you" to Mathias Roth! Talking to you is always elevating, and your moral support but also our Squash sessions, have fostered my mental and physical health. Vielen Dank, to my *brother from another mother*, Markus Stöckl, among many other things, for organizing our hiking trips! I want to also thank Johannes Odenkirchen, for all the discussions, whether it's science, politics or basketball. Overall, I want to thank all my awesome friends who I haven't named yet but who have donated to this dissertation in all kinds of way – be it, by welcoming me at your place so that I felt at home around the world,

bearing with the countless dinner table discussions about corruption or spending quality leisure time together. Thank you, Danke, merci, gracias, dank je wel, and mulțumesc to Andrea, Alexandra, Arian, Caroline, Daniela, Ellen, Flo, Hannah, João, Kat, Katha, Matt, Laura, Rick, Wendelin, Valy and the entire Freiraum Kollektiv!

I want to express my deep gratitude to my family. First off, I sincerely thank my parents, Evi and Hajo for nourishing my curiosity, showing me the pleasure of finding out things and supporting me in countless other ways! Vielen Dank, to my sister, Rike! Your perseverance to fight for your passion has been an inspiration throughout this work! Lots of love and genuine Danke, asante, and muito obrigado to Ute, Gerhard, Wolfgang, Ulla, Christof, Frederik, Michi, Julia, Jochen, Daniel, Patty, Jannes, Romy, Madina, Mzwee Issa, Mzee Ali, Yassin, Mamuu, Mehdi, João, Marion and Pedro!

Finally, I want to thank from the bottom of my heart my wife, Hadija. You have calmed me when I was stressed, cheered me up when I was down and helped me find a way when I was stuck. This dissertation was made possible through your caring patience. Sharing my life with you fills me with joy and optimism. For that, and so many other things, a heartfelt asante sana, mpenzi!

Curriculum Vitae

Nils was born on August the 17th 1986 in Meerbusch, Germany.

After graduating from high-school, he went to Lisbon, Portugal to complete a year of civil service. Motivated by the experiences, he enrolled for a Bachelor Program in Psychology at the WWU University Münster back in Germany. Nils discovered his special interest in the *social* element of psychology during two internships in Rwanda and Tanzania

and therefore decided to study a Research Master in Social Psychology at the VU University Amsterdam.

He graduated in 2012 (cum laude) and received the Master Thesis of the Year Award in Psychology (2012) for his work on corruption – a topic for which he developed a fascination during his final year of the Research Master. Together with Jan-Willem van Prooijen, Francesca Righetti and Paul Van Lange, Nils was able to obtain a NWO Talent Grant that funded their research on the social psychological elements of corruption. This grant also allowed Nils to organize a two-day conference on corruption. As a result of this event, together with several other researchers, Nils founded the Interdisciplinary Corruption Research Network⁹.

The interest in corruption has not vanished and so Nils has been invited to join Transparency International's Anti-Corruption Solutions and Knowledge Network of Experts¹⁰ and was part of the UNODC Education for Justice Expert Roundtable that aims to foster tertiary education on anti-corruption¹¹.

⁹ See <http://www.ICRNetwork.org>

¹⁰ See http://www.transparency.org/experts_network

¹¹ See <https://www.unodc.org/dohadecclaration/en/topics/education-for-justice.html>

The work of his dissertation has been featured in the media; online (e.g. Scientific American), printed (e.g. Katapult), as well as in public radio shows in Germany (Bayerischer Rundfunk) and Great Britain (BBC4). Nils currently works as a Post-Doctoral researcher at the Faculty of Economics and Business and is a member of the Center for Experimental Economics and political Decision-making (CREED) at the University of Amsterdam, researching the collaborative roots of corruption.
