

CONTENTS

Chapter 1	General introduction	9
Chapter 2	CD45 is a more sensitive marker than CD3 to diagnose lymphocytic myocarditis in the endomyocardium	21
Chapter 3	Lymphocytes infiltrate the quadriceps muscle in lymphocytic myocarditis patients: a potential new diagnostic tool	35
Chapter 4	Colchicine aggravates coxsackievirus B3 infection in mice	57
Chapter 5	Lymphocytic myocarditis occurs with myocardial infarction and coincides with increased inflammation, hemorrhage and instability in coronary artery atherosclerotic plaques	75
Chapter 6	Infectious myocarditis: the role of the cardiac vasculature	101
Chapter 7	Development of a new therapeutic technique to direct stem cells to the infarcted heart using targeted microbubbles: StemBells	133
Chapter 8	A comparison in therapeutic efficacy of several time points of intravenous StemBell administration in a rat model of acute myocardial infarction	153
Chapter 9	StemBell therapy improves atherosclerosis after myocardial infarction	169
Chapter 10	General discussion	185
Chapter 11	Summary	203
	Nederlandse samenvatting (<i>Summary in Dutch</i>)	209
	List of publications	213
	Curriculum vitae	215
	Dankwoord (<i>Acknowledgements</i>)	217
