

CONTENTS

Chapter 1	Introduction & outline of the thesis	9
PART I.	BURN WOUND ASSESSMENT	23
Chapter 2	Burn wound classification: the past, present and the future	25
Chapter 3	A systematic review on the quality of measurement techniques for the assessment of burn wound depth or healing potential	45
Chapter 4	New insights into the use of thermography to assess burn wound healing potential: a reliable and valid technique when compared to laser Doppler imaging	83
Chapter 5	The FLIR ONE thermal imager for the assessment of burn wounds: reliability and validity study	99
PART II.	ASPECTS OF SCAR ASSESSMENT	115
Chapter 6	In a clinimetric analysis, 3D stereophotogrammetry was found to be reliable and valid for measuring scar volume in clinical research	117
Chapter 7	Assessing blood flow, microvasculature, erythema and redness in hypertrophic scars: a cross sectional study showing different features that require precise definitions	131
Chapter 8	In vivo polarization-sensitive optical coherence tomography of human burn scars: quantifying birefringence and showing association with histological collagen density	149
PART III.	NEW TECHNIQUES IN RECONSTRUCTIVE SURGERY	167
Chapter 9	Perforator-based interposition flaps perform better than full thickness grafts for the release of burn scar contractures: a multicenter randomized controlled trial	169
Chapter 10	Effectiveness of autologous fat grafting in adherent scars: results obtained by a comprehensive scar evaluation protocol	187
Chapter 11	Sustainable effectiveness of single-treatment autologous fat grafting in adherent scars	201
Chapter 12	Autologous fat grafting; it almost seems too good to be true	211

Chapter 13 Discussion & future perspectives	217
Summary	236
Nederlandse samenvatting	240
PhD Portfolio	244
Dankwoord	248
