# Table of contents

## 1 Introduction

- General introduction

## 2 Oxygenation

- Oxygenation threshold derived from near-infrared spectroscopy

## 3 3D ultrasound

- 3D ultrasound imaging: Fast and cost-effective morphometry of musculoskeletal tissue

## 4 Rowing

- Muscle morphology of the vastus lateralis is strongly related to ergometer performance, sprint capacity and endurance capacity in Olympic rowers

## 5 VO₂max

- Critical determinants of combined sprint and endurance performance: an integrative analysis from muscle fiber to the human body

## 6 Physiological profile

- Maximal oxygen uptake is proportional to muscle fiber oxidative capacity: from chronic heart failure patients to professional cyclists

## 7 Training

- Adaptations in muscle oxidative capacity, fiber size and oxygen supply capacity after repeated-sprint training in hypoxia combined with chronic hypoxic exposure

## 8 Discussion

- Symmorphosis in patients with chronic heart failure
