Acknowledgments
The story of my PhD starts years ago in a typical Dutch winter, in a small apartment shared with 2 Italian guys and close to the Plein 40-'45, West side of Amsterdam. Just after a week living there, my car with which I had travelled from Spain was stolen. I remember I thought, “this is a sign, I think this is going to be difficult …”. And indeed, after a car plus three bikes stolen (and yes, everything was locked) over the 4-year PhD, the path was difficult but also very exciting where in addition to learning many things and living many experiences, I have also met wonderful people whom I would like to name in this thesis.

First of all, I would like to thank my promotor Hans Westerhoff for his invaluable help during the last months, for his numerous ideas to solve upcoming problems and optimism, for his patient guidance correcting a never-ended manuscript and for improving this thesis. Hans, I wouldn’t finish this without you, bedankt! I also would like to extend an immense Thanks to my co-promotor Fred Boogerd for his thoughtful reading and commenting of my thesis.

A special thanks to the brilliant technical support of many people during my infinite experiments- Martin, thank you so much for rescuing me in the lab in many occasions, for your patience and wisdom, and for the analytical and chemostat culturing support. Thanks also to Marijke and José for their help when I needed. Thanks to the people from ACTA-Mark for the tricky organic acids measurements and Egija for your priceless help with 454 Pyrosequencing. Thank you Richard (Systems Ecology) for your kind help during long periods of hydrogen and methane measurements.

I sincerely thank all the people involved in the BACSIN project for the nice meetings around Europe, and specially, the persons with whom I had a close connection: Ramiro, Paula, Edith, Vice, Daia, Daniela, Tian.

I really thank you the help and support from Dietmar Pieper and his group during my research visit in Braunschweig. Specially you Ramiro, I cannot thank you enough for all the help you have given me in my research, for awesome hospitality, the million sequencing-related explanations, the great discussions about research and many other aspects of life, including fun and beers (with the sound track of “Las Nancys rubias”). And thank you Jens for joining us.

Also thank you Hauke Smidt and the people from the Laboratory of Microbiology of Wageningen- Tian, Thomas, Irene, Carmen, Martin, for your help and good company during the project.

202 | Acknowledgments
Thanks to my lab colleagues, for the amazing company and fruitful discussions – Svetlana, Hamed, Susana, Mark, Arno, Koen, George, Zahid, Rully, Rini, Oscar. Special thanks to - Neslihan for introducing me to the “anaerobic world”, and James for teaching me all the tricks of qPCR.

Thanks to you Ruchir: I got a wonderful studio in the Jordan area, you really changed my life.

Pinar, thanks for the great time, chats and good times we had at the university and outside. We have to do it again; I really miss it.

Svetlana, thanks for your friendship, and for your tremendous support, funny conversations during the past years and now. It is no exaggeration to say that you were a fundamental pillar during the writing of this thesis. Spasibo!

Thanks to my students, especially Lucas and Idris. Your contribution to this thesis was invaluable, and thanks for your company and nice discussions. I learnt a lot from both of you!

Another group of friends that have been amazingly supportive over the years has been my Dutch crew: Gerard, Geerd, Gijs, Mark, Jeroen, Lillie, Lidwien, Mirjam, Esther, Frederieke, Oscar. Thanks for the good times in the Stelling and for all the knowledge and good customs I learnt about The Netherlands. Thanks for helping me to improve my poor Dutch, learning sentences like “een biertje voor onderweg” and for so much fun together over the years! Dankje!

I want to thank all my family, and Spanish friends, with special mention to Diego and María, who supported me throughout my PhD, and who were always proud and confident about my research despite not understanding the science. And thank you Carlos for being so pragmatic when I was just in the midst of a thesis crisis. ¡Muchísimas gracias por vuestra confianza y apoyo!

Finally, I want to dedicate this thesis to the memory of my supervisor and friend Wilfred Röling. I don’t have words to express my gratitude for his support, confidence and guidance over my PhD. I still can not believe that He will not see this book …
