

Contents

1. Introduction: Free Will, Consciousness, and Intentional Action	11
1. Neuroscience and Free Will: The Brain ‘Decides’	14
2. Psychology and Free Will: The ‘Adaptive’ Unconscious	18
3. The Threat: Consciousness Is Not in the Right Way Involved in What We Do	21
4. Preview of the Book	27
2. Guidance: Intentional Action Without Intentions?	33
1. Guidance Without Intentions	34
2. Problems for Guidance Without Intentions	38
3. Having Intentions That Do Not Cause What We Do?	42
4. Conclusion	46
3. Unconscious Intentions and the Scientific Study of Intentional Action	49
1. The Causal Theory of Action and What Agents Intentionally Do	50
2. Two Problems With Unconscious Occurrent Intentions	51
3. Sufficiency Conditions for Conscious Intentions	57
4. Basic Actions and Libet-Style Experiments	61
5. Implications for the Scientific Study of Intentional Action	64
6. Conclusion	65
4. The Role of Definitions in Libet-Style Experiments	69
1. The Libet-Style Experiment on Free Won’t	70
2. Voluntary Deciding: Internally Generated or Underdetermined?	71
3. Free Won’t: Conscious Causation or Uncaused Conscious Causation?	73
4. What Underdetermined, Uncaused Conscious Decision-Making Amounts To	75
5. Alternative Definitions of Voluntariness and Freedom	77
6. Conclusion	79
5. Free Will Skepticism and the Conscious Formation of Intentions	81
1. Distal Intentions as Conscious Causes	82
2. Conscious Formation and Passive Acquisition of Intentions	85
3. Conscious Formation of Proximal Intentions	87
4. Free Will Skepticism Revisited	90
5. Conclusion	91

6. Psychology, Unconscious Processes, and Conscious Control	95
1. Psychological Research and Unconscious Causes	96
2. Conscious Control, Intentions, and What the Agent Does Intentionally	97
3. Do the Experiments Show That We Lack Conscious Control?	100
4. Conclusion	107
7. Epilogue: The Scientific Study of Intentional Action and Free Will	109
